SECTION I: ASSEMBLYS COMPOSITE BUDGET STATEMENT

INTRODUCTION

- 1. Section 92 (3) of the Local Government Act (Act462) envisages the implementation of the composite budget system under which the budgets of the departments of the District Assemblies would be integrated into the budgets of the District Assemblies. The District Composite Budgeting system would achieve amongst other things the following
 - Ensure that public funds follow functions to give meaning to the transfer of staff transfer from the civil service to the Local Government Service;
 - Establish an effective integrated budgeting system which supports intended goals, expectation and performance of government at the local level;
 - Deepen the uniform approach to planning, budgeting, financial reporting and auditing.
 - Facilitate harmonizes development and introduces fiscal prudence in the management of public funds at the MMDA level.
- 2. In 2011 Government directed all Metropolitan Municipal and District Assemblies (MMDAs) to prepare the composite budget which integrates departments under schedule one of Local Government (Departments of District Assemblies) (Commencement) Instrument 2009, [LI 1961]. This policy initiative will upscale full implementation of fiscal decentralization and ensure that the utilization of all public resources at the local level takes place in an efficient, effective, transparent and accountable manner for improved service delivery.
- The composite Budget of the Dormaa Municipal Assembly for the 2013 Fiscal Year was prepared from the 2013 Annual action Plan lifted from the 2010-2013 DMTDP whuch is aligned to the Ghana Shared Growth and Development Agenda (2010 -2013).

CURRENT SITUATION ANALYSIS

Physical Characteristics

4. In general, the physical environment in which people find themselves to a large extent determines and affects the socio-economic conditions of the people who dwell in it. This section aims at describing the location and size, topography and drainage, climate and vegetation, geology and soils and natural resources of the Dormaa Municipality as well as their implications for the development of the municipality.

Location and Size

- 5. The Dormaa municipality is located at the western part of the Brong Ahafo Region. It lies within longitudes 30 West and 30 30' West and latitudes 70 North and 70 30' North. It is bound in the north by the Jaman South district and Berekum municipal, in the east by the Sunyani municipal, in the south and southeast by Asunafo and Asutifi districts respectively, in the south –west by western region and in the west and north-west by La Cote d Ivoire. The municipal is Dormaa Ahenkro, located about 80 kilometers west of the regional, Sunyani
- 6. The municipality has a total land area of 917 square kilometers, which is about 3.1 percent of the total land area of Brong Ahafo Region and about 0.52 percent of that of the country. It has 296 settlements, one traditional authority and one constituency, namely Dormaa Central

Topography and Drainage

7. The municipality's topography is generally undulating and rises between 180 metres and 375 metres above sea level. The high range can be found near Asunsu in the north-western part of the municipality most of which is occupied by the Pamu-Berekum Forest Reserve. The highest point is a little over 375 metres above sea level. The medium range rises gradually between 240 metres and 300 metres above sea level. Some of the towns found on this range are

Dormaa Ahenkro, Gonokrom, Nsuhia and Biaso. This range stretches from the northwest to the northeast. The lowland range occupies the southern part of the municipality. The general height is between 180 metres and 240 metres above sea level.

8. The drainage pattern of Dormaa municipality is basically dendritic and flows in the north-south direction. Most of the rivers have catchments areas within the municipality around the high range near Asunsu with only a few taking their sources from the Jaman district and Berekum municipal. The area is well drained as evidenced by the dense network of rivers spread out over the municipality. The rivers are mostly perennial due to the double maxima rainfall, which is experienced in the area. Notable among them are the Bia, Nkasapim and Pamu rivers.

Climate and Vegetation

- 9. Dormaa municipality is located within the wet semi-equatorial climate region with a double maxima rainfall regime. The mean annual rainfall is between 125cm and 175cm. The first rainy season starts from May to June; with the heaviest rainfall occurring in June while the second rainy season is from September to October.
- 10. The dry seasons are quite pronounced with the main season beginning around the latter part of November and ending in February. It is often accompanied by relative humidity of 75 – 80 percent during the two rainy seasons and 70 – 72 percent during the rest of the year. The highest mean temperature of the municipality is about 30°C and occurs between March and April and the lowest about 26.1°C in August.
- 11. The major vegetation types are the unused forest, broken forest, grassland and extensively cultivable forestland and forest reserves. The unused forest is located at the extreme northeast where it extends to Sunyani municipal and Asutifi

district. The forest reserves are Mpameso (197.67 square kilometres), Pamu-Berekum (116.80 square kilometres) and Tain II (297.6 square kilometres). The Mpameso Forest Reserve is located at the south of the district, Pamu-Berekum at the northwest and Tain II at the west of the municipality extending to Sunyani municipal and Asutifi district. The major types of flora found in these forests range from shrubs and climbers to giant silk cotton trees. Timber species including Wawa (Tripolichiton Scleroxylon), Odum (Milicia excelsa), Sapele (Guthagrophrama) and Mahogany (Khaya invernesses) are found here.

12. The broken forest is located at the extreme southwest, where it extends to the Bia District and La Cote D'Ivoire. This type of vegetation is also found at the northern fringes of the Mpameso Forest Reserve. It is characterised by forest interspersed with grassland. The major plant types include elephant grass, shrubs and a few scattered trees with heights ranging between 15m and 28m high. The forest has been extensively cultivated leading to an invasion of grassland vegetation. The extensively cultivable forest occupies the north, central, western and southern part of the municipality. The vegetation is dominated by elephant grass and a few short trees scattered all over the area. As a result of the farming activities in the municipality, these vegetation types are threatened and the forests, for instance, keep on changing to grassland.

Geology and Soils

13. The rocks underlying the soils are of the Birimian formation which covers more than three quarters of the closed forest zone. Economically, it is the most important geological formation in Ghana since it contains all the minerals exported from the country such as gold, diamond, bauxite and manganese. Associated with the Birimian formation are extensive masses of, granite which occur in parallel belts.

Natural Resources

- 14. Dormaa municipality abounds in a number of natural resources, which serve as a good potential for development. Some of these are being exploited whilst others remain unexploited. These resources include gold deposits, clay deposits, forests and water bodies. The gold deposits are found in the Pamu-Berekum Forest Reserve, Kofiasua, Aboabo, Nsuhia and Koraso. Currently, some mining companies have been permitted to prospect for the mineral in some of these communities.
- 15. The clay deposits in the municipality are mainly found in Pampaso, Asuotiano, Aboabo, Nsuhia, Pamu-Berekum, Dormaa Ahenkro, Yawkrom and Amasu. Currently, the clay partially exploited for the manufacture of burnt bricks. The Traditional Council is the major sponsor of this activity; that is, the Dormaa Brick and Tile factory. Large tracts of sand and stone deposits are also found in the municipality, other groups and individuals are also engaged in small-scale brick manufacturing. The municipality has extensive forest reserves including Mpameso, Pamu-Berekum and Tain II from which valuable timber species like Odum Mahogany, Papao, Asanfina and Edinam, among others, are being extracted on commercial scale. Many rivers and streams notably Bia, Nkasapim and Pamu which drain the municipality serve as a potential source of fishing and small scale irrigation schemes.
- 16. The municipality is also rich in under ground water resources due to the high rainfall and the nature of the rocks. This is essential for ground water development such as the drilling of boreholes to help provide the population with potable water.

Demographic Characteristics

17. Population studies play a crucial role in any planning activity. They are even more crucial in the preparation of development framework that will span over a

period of time. It is in the light of this that the demographic characteristics of the Dormaa municipality have been analysed and its development implications identified.

Population Size and Growth Rate

18. The population of the Dormaa municipality as at 1960, 1970 and 1984 was 51,057, 76,650 and 107,996 respectively. The 2000 population and housing census put Dormaa municipality's population at 100,653. The growth rate of the municipality population between 1960 and 1970 was 4.0 percent but this decreased to 2.4 percent between 1970 and 1984. Between 1984 and 2000, the growth rate between the censual periods was 2.1 for the municipality and 2.5 and 2.7 for the region and nation respectively. The decline in the growth rate between 1970 and 1984 is due mainly to the decline in the cocoa industry in the then district. People from other parts of the country who migrated to the Dormaa municipality to partake in the booming cocoa industry, this time round migrated out to other parts of the country especially the Sefwi area where the industry was booming. Others also migrated to La Cote d'Ivoire where the industry has just picked up. The massive bush fire that swept through the cocoa growing areas in the municipality in 1983 also resulted in the out-migration of farmers to other areas to engage in gainful economic activities. This mainly accounted for the decline in the growth rate between 1970 and 1984. Dormaa municipality's population, which has been increasing at a decreasing rate, also manifested itself in the 2000 population and housing census.

Settlement Distribution

19. The 1970 population census defined an urban settlement as one with population 5000 people and above. Using this definition as a yardstick to determine whether a settlement is urban or rural, then it is obvious that there are only two settlements within the municipality, which can be classified as urban settlements. These settlements are Dormaa Ahenkro and Nkrankwanta which is now Dormaa west district

Settlement Pattern

20. The forms of settlements which are predominantly in the municipality are nucleated. Some of the nucleated settlements are Dormaa Ahenkro and Amaasu

Settlement	Female	Male	Total
Dormaa Ahenkro	12,220	10,693	22,913
Amasu	2,267	1,952	4,219
Antwirifo	1,089	1,185	2,274
Nsuhia	1,050	1,079	2,129
Aboabo No.4	1,056	966	2,022
Kofibadukrom	913	887	1,800
Asunsu No.1	908	840	1,748
Kofiasua	877	762	1,639
Nsesereso	740	824	1,564
Danyame	739	795	1,534
Kwameasua	781	751	1,532
Aboabo No. 2	770	740	1,510
Asikasu No. 1	648	622	1,270
Maasu	538	516	1,054
Aboabo No. 3	524	503	1,027
Kuren	523	502	1,025

 Table 1: Population Distribution (Twenty Major Settlements, 2000)

Source: Ghana Statistical Service (2000 Population and Housing Census)

21. In all, there are 296 settlements in the municipality and these are concentrated mostly in the northern and southern part of the municipality with the central portion poorly populated. The northern portion of the municipality has the highest concentration of large settlements (Figure 6). The central part is sparsely populated and this is due to the fact that it constitutes a substantial part of the

Mpameso Forest Reserve. The southern part of the municipality has the highest concentration of smaller settlement (see Figure 6). The urban population constitutes 31.3 percent of the municipality's total population. This implies that the district is predominantly rural in character, with agriculture as the predominant occupation.

Age-Sex Composition

22. Dormaa municipal's population is generally youthful with those in age group of 15 - 64 constituting 57 percent; age group 0 – 14 forms 36 percent whilst those above 64 years constitute 7 percent of the population. The male-female ratio is 1:1.07. This implies that for every 9 males in the municipality, there are 10 females to contend with. This phenomenon is not different from what is happening at the national level where females out-number males. The implication here is that any measure to reduce poverty should be targeted towards females and they should also not be left out in decisions affecting the socio-economic development of the municipality.

Age Group	Percentage Number of People
0 - 14	36
15 – 64	57
65 and above	7

Table 2:	Aae	Distribution	in	Dormaa	Municipality	,
	Age.	Distribution		Donnau	runcipuncy	

Source: Field Survey, 2010

Rural – Urban Split

23. Dormaa municipality can be considered as a rural one in respect of the nature of its rural–urban split. In 1992 the rural-urban split 74.1:25.9 as against 63.1:36.9 for the nation. Currently the municipality depicts the rural-urban split of 70.2:29.8 as evidenced by the urban population of 30,196 and rural population of 70,457 as against 61.2: 38.8 for the nation. This situation poses a problem for the distribution of higher order services and functions in view of the scattered nature of the rural settlements.

Labour Force

- 24. The municipality has a large pool of labour force. The labour force constitutes 53 percent of the sampled population. The percentage of the labour force actually working may be smaller due to the fact that those between ages 15 17 are not expected to work by the laws of the country and for the fact that those in age group 0 14 and 65 and above form about 43 percent of the municipality sampled population. Additionally most of those within the group are also in school.
- 25. The municipality's age dependency ratio is 1.5:1 meaning that almost every two adults have themselves and additional person to cater for. The implication for the municipality is that, there would be less pressure on the potential labour force since more people are catering for few dependants within the municipality. Secondly, would be investors will also have a large pull of labour force to draw from.

Occupational Distribution

26. The predominant occupation in the municipality is agriculture and employs about, 62 percent of the active labour force. Services employ 18.4% of the municipality active labour force whilst industry and commerce absorbs 8.6 and 11.0 percent respectively. It is of interest to note that whilst the number of

people engaged in agriculture had been decreasing since the 1970s that of service, industry and commerce had been steadily increasing. The steady increases in the number of commercial activities in the municipality can be partly attributed to improvement of surface accessibility from Berekum to Dormaa Ahenkro, the municipality capital and the increasing volume of trade in the six major market centres in the municipality namely Dormaa Ahenkro, Nkrankwanta, Kofibadukrom and Amasu.

27. The increase in the number of people in industry is due to the resource base of the municipality, which supports the establishment of small-scale industries like cassava processing, carpentry, brick and tile and palm oil extraction etc. This actually demonstrates the fact that the economy is growing and as the economy grows, agriculture is shedding labour to others sectors of the municipality's economy such as commerce and industry. The implication of these phenomena for development is that the municipality is gradually moving away from over dependence on agriculture and if this trend continues, poverty levels in the area will go down considerably in the foreseeable future.

Migration

- 28. Migration simply put involves the movement of people, from one place, region or country to another and the Dormaa municipality is no exception. The survey indicated that 47 percent of the sampled households for this study have a member or two who have migrated within the last two years. About 30.6 percent of the migrants from the municipality, according to their families have no intention of returning. Whilst 69.4 percent intend to return. Migrants from the area are motivated by the following reasons to migrate:
 - a. Employment 68%
 - b. To learn a trade 9%
 - c. Education 19%
 - d. For adventure 4%

- 29. The major reason for both in-migration and out-migration is employment. People move simply to look for greener pastures elsewhere to better their living conditions and the destination of the out-migrants are Overseas, Accra, Kumasi, Sunyani and the cocoa growing areas of Sefwi. Others also migrate to learn a trade through apprenticeship. Education also moves people out of the municipality,. This is due to the fact most households prefer the "so called" better endowed schools for their wards and therefore send them out to Cape Coast, Accra and Kumasi, where most of these schools are situated. Migration to the Dormaa municipality is very small and forms only about 17.4 percent of migrants.
- 30. However, with the political instability in La Cote d'Ivoire, it is anticipated that the Municipal will receive more influx of people if solution is not immediately found to the problem. Males constitute about 72 percent of the migrants. The predominant age group of the migrants is between ages 15 44 and their educational level BECE Certificate (71 percent). Those with SSSCE Certificate form about 32 percent of the migrants and those with Technical and Vocational Training accounting for 3 percent. The implication of this pattern of migration is that the municipality exports more labour than it receives and this can ultimately affect the dependency ratio of the municipality. Secondly, the movement of the productive labour force can also affect production levels in the various sectors of the local economy.

Ethnicity, Religion and Culture

31. The municipality is predominantly dominated by the Bonos who constitute 96.0%, Anyins 2.4%, Northerners 1.0% and others 0.6%. The major language spoken is Bono-Twi. The people are mostly Christians accounting for about 84%, Moslems about 14.8%, Traditionalists 0.7% and others 0.5%. Despite the religious diversity, there is religious tolerance in the municipality. This healthy co-existence augurs well for peace, stability and development. The main festival

of the people is the Kwafie festival. This festival is celebrated once in every four years (i.e. in November). The recent one was celebrated in November, 2002.

Major Findings of the Municipality's Demographic Characteristics

- The municipality's population is highly concentrated in the northern part of the municipality due to the presence of major settlements. Development, therefore, is heavily skewed towards the north to the detriment of the south.
- 2. The municipality's population growth rate is reducing due to the decline in the cocoa industry and the resultant migration of farmers and also due to improved family planning practices.
- 3. It is also worthy to note that a sizeable number of the active labour force is out-migrating in search of greener pastures and the in-active labour force left behind. This is affecting the dependency ratio and production levels.
- 4. The large labour force (skilled & unskilled) is a potential for would-be investors.
- 5. The municipality has a large average household size, which is a threat and could have adverse effect on the per capita income of the municipality.

Current Conditions Of The Natural Environment

- 32. The cultivation of food and industrial crops play a major economic role in the Dormaa municipality. The prevalent method of clearing the land is the practice of slash and burn. Such farming practices leave the farming land bare and expose its nutrients to the vagaries of the weather. Sheet and gully erosions usually set in during the rainy season where top soils are washed off farm lands without adequate vegetative cover. This is gradually destroying fragile lands and thus changing the ecology of the areas highly affected. The effects of these are;
 - Massive land degradation
 - Low crop yield
 - Low income levels

- Poor surface accessibility (bad roads).
- 33. The incidence of bush-fires is also very high in the municipality. It constitutes a threat to the economic species of timber, forest reserves, animals and the general environment as a whole. The occurrences of these bush-fires are mostly attributed to both the activities of game hunters and farmers. The effects of these activities on the environment include:
 - Loss of life and property (farms/houses/harvested products)
 - Environmental degradation
 - Loss of vegetative cover including crops
 - Drop in Income levels
 - Increase Poverty among the population.
- 34. Some of the contributory factors to these situations can be deduced from a survey conducted in the municipality. It indicated that about 87.6% of households use firewood, 11.7% charcoal and only 0.7% LPG gas. It is estimated that 88% and 5% of the sources of firewood come from within and outside the municipality respectively. About 37% and 63% of charcoal also come from within and outside the municipality respectively. The continuous exploitation of these resources from the forest reserves contributes to the depletion of trees species and will have a negative effect on the environment if measures are not immediately taken to minimise the practice.
- 35. Though the municipality currently has about 197.67 Km2 of Forest Reserves with economic trees such as Papao, Asanfina, Odum, Ofram, Wawa, Amire, Mahogany, Utile, Edinam, Bonsamodua, Kyenkyen and Hyedua; they are extensively being exploited by timber firms operating in the municipality. The firms include Asuo Bomosadu Timber and Sawmill Ltd, Oti Yeboah Sawmill Ltd and Ayum Resources Limited.

- 36. This is impacting negatively on the municipality's environment. The impact includes:
 - Deteriorating physical conditions of most feeder roads due to heavy duty trucks plying on them and rendering most of them unmotorable especially during the rainy season;
 - Depletion of the economic trees with little afforestation programmes;
 - Young trees are destroyed in the process of felling and transporting timber from the forest, thus turning the forest into grassland;
 - Destruction of food and industrial crops through indiscriminate felling and transportation of timber from the bush;
 - General degradation on the environment with its accompanying negative effects on water bodies, land and humankind.

Household Characteristics

37. The Dormaa municipality has an average household size of 4.2 and an average of four households per house. This translates into an average of about 17 persons per house.

Household Income Pattern

38. The average annual income of an average household size of 4.2 for the sampled population is GH¢360.00. This translates into an average per capital annual income of GH¢85.70. Majority of the people earn their income from agricultural activities (62%), industrial activities (8.6%), commercial activities (11.0%) and the service sector (18.4%). Income levels are generally low throughout the municipality as compared to the national average income per head of GH¢208.00 (i.e. \$390 at GH¢1.30). There is the need to develop the major sectors of the municipal economy especially agriculture through effective processing and marketing of produce.

Income Distribution

39. High inequalities exist in the distribution of income in the municipality. It was revealed by the field survey that the lower 22% of the population enjoyed 13% of the income while the top 18% enjoyed as high as 51% of the municipality income. Presently, a large proportion of the low income group is found in the agricultural sector. Apart from improving income levels, there is the need to ensure a fair distribution of the income.

Expenditure Pattern

40. The average annual household expenditure for the sampled population is GH¢658.00 while the annual per capital expenditure stands at GH¢109.00.
 This compares favourably with the annual the average national per capital expenditure of GH¢98.70. The highest item of expenditure is food (44.8%), as shown in the Table below:

Expenditure Item	Percentage	
Housing	9.3%	
Education	14.8%	
Health	7.6%	
Energy	4.1%	
Water	6.9%	
Food	46.3%	
Clothing	5.4%	
Funeral	4.7%	
Miscellaneous	5.6%	
Total	100%	

 Table 3:
 Expenditure Pattern in the Municipality

Source: Field Survey, 2010

Poverty Issues

- 41. In the Dormaa municipality, there is an appreciable level of poverty as most of the inhabitants practice subsistence agriculture. From a base-line survey conducted in 2008, about 27% of the district's population is classified poor. Generally, poverty is high among the rural dwellers, women and other vulnerable groups such as People With Disabilities (PWDs), People Living With HIV/AIDS and Orphans. As a largely agrarian economy, poverty is classified into cash poverty and food insecurity (where families/individuals hardly afford balanced three square meals a day). Extreme poverty in the district is estimated at 13%. Majority of the poor inhabitants fall within the cash poverty bracket whilst those within the food bracket are few. The following are the major causes of poverty in the municiplaity: -
 - Limited opportunities for middle level man power
 - Limited employable skills among women, the PWDs and other vulnerable groups
 - Low level of education and capacity
 - Low access to credits
 - Low incomes due to low and fluctuating prices of agro-produce.
- 42. To help reduce the level of poverty in the municipality, the following measures are considered very important.
 - Encourage savings among income earners in the municiplaity.
 - Organisation of skill training programmes for the Youth, Women and the PWDs in various vocations.
 - Organisation of farmers, agro-processors small-scale manufacturers and business-owners into groups to enhance their chances of accessing credit from financial institutions.
 - Increasing the level of education among the rural inhabitants especially products of JHS and SHS.

- 43. It is hoped that if these measures are put in place, it will go a long way to enhance the payment of community contribution towards the provision of water and sanitation facilities in the municipality.
- 44. Poverty mapping delineates and draw boundaries between the deprived or poor areas of the district from those areas that are relatively well-off. Poverty maps divide the district into "Poverty Pockets" based on factors such as differences in geographical location, nature and severity of poverty and other factors. These maps can be used to easily identify and assist poor communities that cannot raise funds to pay for their 5% contribution and user fees. The table below describes the spatial dimensions of incidence of poverty in the district and its characteristics.

Poverty	Location	Characteristics				
Pocket						
	North western part of the	Inadequate supply of water and				
	municipality covering a	sanitation

		Can contribute to capital cost			

Poverty Levels

45. The incidence of poverty in Ghana is measured at two levels; upper and extreme lower levels. The upper poverty line in Ghana refers to income levels of up to GH¢90.00 a year or GH¢7.50 per month. The extreme poor are people with incomes below GH¢70.00 a year or GH¢5.80 a month. The current national statistics on poverty estimates is that about 40% of the national population has incomes below the upper poverty line; whilst about 27% of the population has incomes below the extreme poverty line. With reference to the above indicated

cut-off points, it was estimated from the field survey that 34.8% of the municipality's population are poor whilst 12.4% are extremely poor. The survey also revealed that about 87% of the municipality's poor reside in rural communities. The findings of the field survey corroborate the fact that poverty in Ghana is a rural phenomenon with the rural communities accounting for more than 60% of the poor. In terms of economic activity, poverty in the municipality is by far highest among food crop farmers. This may be attributed to low prices of their produce.

EDUCATION

46. Education is the main key to unlocking the full potentials of an area's human resources for development. It creates awareness, enhances the understanding of situations and events and facilitates the infusion of innovations and new or improved technologies into the production system. These in turn help to improve productivity and overall production in all sectors of the local economy. In appreciation of this fact, many educational institutions have been established in the Dormaa municipality.

Educational Attainment and Participation

- 47. The proportion of the municipality's population aged six years and above who has never been to school is 34%. This compares favourably with that of Brong-Ahafo Region (42%). Given the importance of education in both local and national development, the municipality considers the development of education as a major priority.
- 48. In spite of the fact that enrolment at the basic school level is quite high, many pupils begin to drop-out in their academic progression. The gross enrolment rate for the 2008/2009 academic year in basic schools is 83.6%, whilst that of the second cycle is 37.6%. A slightly higher percentage of females (51%) than males (49%) are currently in pre-school. However, the pattern changes to that of a higher percentage of males than females of each subsequent higher level

after the pre-school level as indicated below. For instance, the percentage of females (48.4%) is lower than that of males (51.6%) at the primary school level. More than three–fourth (68.6%) of those currently in school are in the kindergarten and primary school level followed by those in JHS (24.1%). The proportion of the population currently at post-basic level (7.3%) is the lowest. Though the participation rate of both sexes is encouraging, the drop-out rate among girls is more pronounced at all levels of academic progression. Incidence of drop-out rate especially among girls in the municipality have been mainly attributed to the inability of parents to provide for the school needs of girls and their engagement in farming and commercial activities.

Education Infrastructure

- 49. The mere existence of schools is a vital determinant of access to education. The municipality has 116 kindergartens, 120 Primary Schools, 80 Junior High Schools, 5 Senior High Schools and two Business/Vocational Schools. Most of the educational facilities (78%) are owned and managed by the government. In terms of location, primary schools are the most widely distributed. Most communities have access to basic schools located either in the community or neighbouring community.
- 50. On the other hand, apart from Aboabo No.2 (a rural setting), most of the postbasic schools (SHS and Business/Vocational Schools) are located in the only two urban centres namely Dormaa Ahenkro (3) and Amasu (1). This scenario implies that students from the rural communities have to either relocate or travel daily to these two towns to pursue post-basic education. As a result of difficulties this poses to them, many aspiring students leave school after their basic education. Further, most of the infrastructure of the basic schools in the municipality is in dilapidated state. Although, most of the JHS (62%) and all the SHS have wellconstructed buildings, not a single one of them has a workshop to facilitate technical trainings for students. Again, there is little number of libraries for the JHS students to study during their free time.

No.	Level	No. of Schools	No. of Schools with Good Structures	No. of Schools with Bad Structures
1	Kindergarten	116	8	76
2	Primary	120	28	61
3	JSS	80	20	41
4.	SHS/Technical	5	-	-
	Total	321	56	178

Table 5: Type and Number of Structures

Source: Municipal Directorate of GES, Dormaa Ahenkro (2010)

51. Poor sanitary facilities also pose a serious problem to most schools in the municipality. In both the urban and rural areas only 24 basic schools (both Primary and JHS) have access to adequate toilets. Few of these schools have access to potable water facilities either in the form of boreholes or hand-dug wells fitted with pumps. Again, only few schools in the urban areas have electricity and adequate furniture. The inadequacy of office space for teachers is also a matter of concern. Despite the efforts made so far in the provision of school infrastructure, a lot more needs to be done to improve access to education in the municipality. More schools are particularly required in the communities where students walk long distances daily to nearby communities to attend school. Further, there is the need to improve the infrastructure of the existing schools to enable them deliver quality education.

Teacher-Pupil Ratio

52. The teacher-pupil ratio is an indicator used to assess the adequacy or otherwise of teachers in relation to pupils. At present, the teacher-pupil ratio in the public schools in the municipality does not completely differ from the national standard teacher-pupil ratios as shown below:

Level	National Ratio	Dormaa Municipal Ratio
Kindergarten	1:30	1:46
Primary	1:35	1:32
JHS	1:24	1:17
SHS/Technical	1:20	1:24

Table 6: Teacher – Pupil Ratio

Source: Municipal Directorate of GES, Dormaa Ahenkro, 2010

53. These figures appear manageable and hence could enhance the attention given to pupils and students. This makes the classroom more conducive to teaching and learning as teachers would have enough time to address the individual academic problems of pupils and students.

Educational Staffing

54. The municipality has a total number of 1,355 teachers. Out of this number, 614 (44.8%), are trained. Most of the untrained teachers 741 (77.0%) teach in the pre-school and primary school level.

	No. of	Trained		Untrained		Total	
Level	Schools	Teacher	S	Teachers			
	Schools	No.	%	No.	%	No.	%
Kindergarten	116	45	20	179	80	224	100
Primary	120	314	45	390	55	704	100
JSS	80	255	60	172	40	427	100
SSS/Technical	5	-	-	-	-	-	

 Table 7: No. of Trained and Untrained Teachers

Source: Municipal Directorate of GES, Dormaa Ahenkro, 2010

55. The large number of untrained teachers at the basic level together with low motivation for teachers and the unavailability of technical workshops to facilitate training have been largely attributed to the unsatisfactory performance of pupils in the Basic Education Certificate Examination in the municipality.

The Role of Private Sector in Education Delivery and Training

56. The private sector is also making great strides in augmenting the efforts of the government as far as education and training is concerned. For instance, there are 31 Primary Schools, 19 Junior High Schools, and a Vocational/Business educational institution that are owned and managed by private individuals and religious organisations in the municipality.

Skills and Entrepreneurial Development for the Youth

57. Aside the formal Vocational and Business Education institutions, in the formal sector, many artisans and craftsmen and women have their own arrangement which they take-up some of the youth in the municipality for training in their respective trades and crafts. By this, they complement the human resource development efforts of the formal education institutions.

Education Sector Collaborators

58. There is a close collaboration between the Municipal Directorate of Education and other stakeholders especially the Municipal Assembly. For instance, over the years, a chunk of the Municipal Assembly share of DACF is channelled into education related projects and programmes such as the provision of school structures, furniture, sponsoring of teacher-trainees, STME Clinics, among others.

Challenges in Education Sector

59. The performance of the education sector in the municipality is saddled with a number challenges ranging from poor and inadequate infrastructure, inadequate logistics, low moral of staff. For instance, the main office of the municipal directorate is housed in a temporal wretched structure and its annex in rented premises. The directorate has only one computer and the Municipal Director is also without permanent residential accommodation.

Health

60. Poor health status is both a cause and consequence of poverty and hence, the development of the entire municipality. Poor health reduces productivity; it is a drain on disposable income and reduces savings as well as stifles investment. Efforts at human resource development will therefore be grossly incomplete until efforts are made to improve the health status of the people through improved access to quality health care.

Type and Number of Health Facilities in the Municipality

61. Physical presence of health facilities and access to health institutions is not a major problem in the municipality as there are 23 health institutions made up of two Hospital, one Health Centre, five Rural Clinics and two Private Clinics. Others are two Private Maternity Homes, two Community-Health Planning and Services (CHPS) Compounds at Twumkrom and Kwameyeboahkrom. Also, there are 104 outreach points that are evenly distributed throughout the municipality. The table below shows the type and number of health facilities in the municipality.

Туре	Public	Private	Mission	Total	Location		
Hospitals	-	1	1	2	Dormaa Ahenkro

Staffing

62. Unfortunately, however, these health facilities lack adequate numbers and the right calibre of staff to run them. For instance, apart from the municipal hospital, only one qualified staff mans each of the health facilities. To further buttress this point, the doctor-patient and the nurse-patient ratios now stand at 1:21,876 and 1:1,141 respectively. This situation is greatly hampering proper and effective health care delivery in the municipality with its obvious repercussions on recuperation rate and hence productivity.

Morbidity Pattern in the Municipality

63. A cursory look at the morbidity pattern of the municipality reveals that malaria tops the top ten diseases accounting for 65.7% in 2008 and 59.7% in 2009 of all reported illness. It is followed by URTI 9.3% and Rheumatism 5.7% in 2008 and URTI 11.8% and Rheumatism, 7.8%. Meanwhile, the top ten causes of sickness in the municipality are shown in Table 13.

No.	2008 Cases	No. of	%	2009 Cases	No. of	%
	2000 Cu3C3	Cases			Cases	/0
1.	Malaria	88,381	65.7	Malaria	60,210	59.7
2.	URTI	12,520	9.3	URTI	11,956	11.8
3.	Rheumatism	7,755		Rheumatism	7,951	7.8
4.	Skin Diseases	7,313	5.4	Skin Diseases	5,740	5.6

Table 10: Top 10 Diseases in the Municipality (2006 – 2009)

Source: Ghana Health Service, Municipal Office, 2010

64. This is further buttressed by the fact that, (according to the base line study) 74% of the people dispose off their liquid waste in open spaces and bushes behind their houses, while another 14% use soak-aways. It was also observed that most of the houses had unkempt surroundings especially at the peripheral areas of towns and villages. The situation is little better with solid waste management. For instance, the survey revealed that about 90% of the people dispose off their refuse in public dumping sites while 6% dump their refuse indiscriminately and only 4% burn their refuse. However, the ten top causes of mortality in the municipality in 2004 and 2005 are shown in **Table 14 below**.

No.	2008			2009			
	Cause of Death	No.	%	Cause of Death	No.	%	
1.	Septicaemia	52	33.3	HIV/AIDS Related	24	18.8	
2.	Pneumonia	25	16.0	Pneumonia	19	14.8	
3.	HIV/AIDS Related	21	13.5	Malaria	16	12.5	
4.	Cardio Vascular Accident	16	10.3	Anaemia	14	10.9

	Total	156	99.6	Total,	128	99.7	

Table 11: The Top Ten Causes of Deaths in the Municipality from 2008 – 2009

Source: Ghana Health Service, Municipal Office, 2010

Out-Patient Department (OPD) Attendance

- 65. At the moment, the municipality has an Out-Patient Department (OPD) visits per capita of 1.8. Malaria continues to be the leading cause of OPD attendance and admissions account for 52.6% in 2007, 55% in 2008 and 51.6% in 2009. This feature is not different from the situation at the national level. This implies that a greater attention should be given to sanitation management.
- 66. Meanwhile some malaria control measures have been put in place to curb the high morbidity rate through malaria. They include public education campaigns, treatment of cases at health facilities, administration of Intermittent Prevention

Treatment (IPT) for pregnant mothers and sale of treated bed nets at subsidised prices.

HIV/AIDS Situation in the Municipality

- 67. Available statistics from the Municipal Health Directorate indicates that HIV/AIDS prevalence rate in the municipality has always remained below the 5% epidemic rate. The prevalence rate for the years 2006, 2007, 2008 and 2009 stood at 3.4%, 3.3%, 3.1% and 2.9% respectively. It could be sadly said that whiles the national prevalence rate fell from 3.6% in 2003 to 3.1% in 2006 and 2.7 in 2008 that of the municipality stood at between 3.3% and 2.9% within the same period. The HIV/AIDS situation is too alarming that it demands concerted and sustained action to deal with the situation.
- 68. It was in line with this approach that since 2003, the Municipal Assembly has developed strategic plans (2001 2005) and (2006 2009) to reduce the rate of increase and prevalence. Further, since 2002, 28 CBOs and 12 NGOs have been supported with funds by the Ghana AIDS Commission to organise various HIV/AIDS prevention programmes in 172 communities in the municipality. About 70 people living with HIV/AIDS (PLWHAs) and 340 Orphans and Vulnerable Children (OVCs) have been provided with care and support. The care and support took the form of payment of medical bills, provision of nutrition supplements to PLWHAs, payment of school fees, provision of school kits and feeding grant to the (OVCs). Capacities of the CBOs and NGOs have also been built through various training sessions organised for them either within or outside the municipality.

69. The factors driving HIV/AIDS upwards in the municipality include:-

- i. Cross border trading and social activities in La Cote d'Ivoire.
- ii. High level of poverty (unemployment and underemployment).
- iii. Peer group influence

iv. High rate of seasonal migration to Sefwi area (Western Region) to either cater for cocoa farms or practice learned trade where the migrants leave behind their spouses and regular partners for months.

Population Management (Family Planning)

- 70. A rapid natural increase in population especially among the poor, (in the rural areas and urban slums) poses a great constraint on household incomes, saving potentials and access to basic facilities and services. It is therefore expedient to stringently control the rate of population growth in order to keep it within the carrying capacity of the municipality's resources. This will also ensure development of human resources to promote development rather than have a large population size which do not enhance the development of the municipality.
- 71. In the Dormaa municipality, there have been intensive population control measures focusing on reproductive health and birth control through the use of contraceptives. This is done by officials of Family Planning Service organisations in conjunction with health institutions in the municipality. So far, these efforts seem to be yielding positive results as the municipality's population is currently growing at a decreasing rate with the current growth rate standing at 2.1 percent per annum. These services are provided to prevent unplanned pregnancies, space births, treat infertility and enhance reproductive health. Some of the family planning methods and services available in health facilities include condom use, oral pills, injectables, IUD and Norplant as well as natural methods. It is estimated that 3,562 persons representing 2.4% of the municipality adult population have registered for family planning services.

National Health Insurance Scheme (NHIS)

- 72. Like all other MMDAs in Ghana, the Dormaa municipality has established a Municipal Health Insurance Scheme in an attempt to provide an opportunity to all registered persons to unhindered, cash-free and efficient health services. Since the introduction of the scheme in the municipality in 2004, 31,000 people (31% of the municipality population) have been duly registered and issued with identification cards which qualify them to access health services. In 2008 and 2009, the Municipal Scheme Office has paid claims totalling GH¢2,315,471.19 and GH¢3,108,178.42 respectively to 22 Health Institutions which the office has signed Memoranda of Understanding (MoU) with. The Health Institutions are as follows:
 - 1. Dormaa Presbyterian Hospital
 - 2. Kwameasua Presbyterian Clinic
 - 3. Aboabo Presbyterian Clinic
 - 4. Asikasu/Nsuhia Clinic
 - 5. Danyame Clinic
 - 6. K.K.K. Presbyterian Clinic
 - 7. New Chiraa Clinic
 - 8. Kofiasua Presbyterian Clinic
 - 9. Carman Hey's Clinic
 - 10. Amasu Clinic
 - 11. Ohenewaa Memorial Clinic
 - 12. Florence Maternity Home
 - 13. Ceci Maternity Home
 - 14. Nsesereso Community Clinic

Referral Points

- 1. Regional Hospital, Sunyani
- 2. Komfo Anokye Teaching Hospital
- 3. St. John of God Hospital, Duayaw Nkwanta

73. Effective membership drive is constrained by widespread poverty, apathy and uncertainty about the benefits to be derived from joining the scheme. The effective operationalisation of the scheme in the municipality is also severely constrained by high attendance at the health facilities and its resultant high bills, prescription of drugs outside the drug list by practitioners and threats from providers to withdraw services due to the scheme's indebtedness.

Health Sector Collaborators

74. A close collaboration exists between the Municipal Health Management Team (MHMT) and the Municipal Assembly. An enormous portion of the Municipal Assembly's share of DACF is channelled into health related projects such as provision of health facilities and potable water (boreholes), support for National Immunisation Day and Malaria Control programmes.

Challenges in Health Delivery Services

75. The delivery of health services in the municipality is saddle with a number of challenges ranging from inadequate professional staff, inadequate transport facilities, inadequate residential accommodation and inadequate financial resources. The municipality has only 4 doctors and 24 nurses to serve a population of 100,653. There is also very little opportunity for upgrading skills of staff. The MHMT has only two pick-up vehicles and three motor bikes for their operations. Staff accommodation is also insufficient and in most cases the available premises have deteriorated functionally.

ENVIRONMENTAL HEALTH

Water Delivery System

76. The current water delivery system in the municipality is a critical development challenge that requires urgent interventions. Majority of the people do not have access to reliable potable water. Boreholes constitute the major source of potable water. Its distribution is inadequate. The sources of water are shown in table 15 below:

 Table 12: Major Sources of Water in the Municipality

Source of Water	No. of Community with access	Location	Remarks
1. Pipe System	2	Dormaa Ahenkro, Amasu	Most households are not served.
2. Boreholes	263	In 115 Communities	227 functional
3. Hand dug wells	97	In 86 Communities	81 functional
4. Hand dug wells without pumps	1,492	Scattered in Communities	Few are not in use.

Source: Municipal Water and Sanitation Team Office, DMA, 2010

Water Provision and Management

- 77. The provision and management of potable water in the municipality has not been easy task to the Assembly. The Assembly is currently faced with a number of challenges in its attempt to make water accessible to the people. The challenges range from human to natural factors. These factors are that:-
 - Some of the sources dry-up in the dry season compelling people in those areas to revert to drinking from unwholesome sources making them vulnerable to water related diseases such as guinea worm.
 - The boreholes hand-pumps constantly break down due to excessive pressure coupled with inability of communities to raise enough money for replacement of parts and general maintenance.
 - Even though wells without hand pumps appear to be one of the major sources of water, they are most left unprotected. As a result, run-offs empty their contents into such unprotected wells making them unsafe for human consumption.

- For economic reason, most consumers of the pipe system in the municipality have difficulties in paying their water bills. This adversely affects the smooth operations and maintenance of the facility.
- Administratively, the provision and management of water services are hampered by inadequate logistics, transport and motivation of office and field staff.

Sanitation and Waste Management

- 78. The management of waste in the Dormaa municipality is far from the desired situation. The disposal of both solid and liquid waste including human excreta, and household refuse are poorly done. Several tonnes of refuse are heaped in urban communities like Dormaa Ahenkro, Amasu and Kofibadukrom. Though some households bury or burned their refuse, about 90% of households use the open surface system for their waste disposal. It is a common practice for people in most communities to defecate in the bush ("free range") mainly due to lack of access to convenient toilet facility. Some are poor to pay for the user fees charged in the communities where toilet facilities are provided.
- 79. Where toilet facilities are provided by either by households or the Municipal Assembly, there is no problem of timely and regular disposal of human excreta due to the reliability of the only septic emptier vehicle. It belongs to the Municipal Assembly. The Municipal Assembly has also acquired and developed a land in Dormaa Ahenkro as a final disposal site for both liquid and solid waste generated in the town.
- 80. In an effort to improve upon access to potable water, the Municipal Assembly has collaborated with a number of development partners. They include the Ghana Water Company Limited (GWCL) Community Water and Sanitation Agency (CWSA), Community-Based Rural Development Project (CBRDP) (formerly Village Infrastructure Project – VIP) and the Catholic Secretariat among others. The Municipal Health Management Team has also complimented these efforts by

educating people on how to keep water sources clean and safe. They also assist in detecting and treating water-borne diseases.

81. Community ownership and management of water facilities is also being vigorously promoted to ensure their sustainability. Water and Sanitation Committees (WATSANs) have been formed in communities that have benefited from the provision of some form of water facility especially boreholes. They are trained and provided with basic tools and equipment to carry out regular servicing and repairs of their facilities. Most communities in the municipality **do** not also have any proper drainage system. The inadequacy of proper household and community drains has led to the presence of stagnant water in residential areas giving rise to breeding of mosquitoes and massive erosion of the built environment.

Agriculture

82. The mainstay of the municipality's economy is agriculture. Currently, it employs about 60% of the economically active labour force. Most of the households are engaged in farming or agricultural related activity. Farming is largely carried out on small-scale basis. The average acreage cultivated ranges between 6 – 10 acres for all crops. Despite its importance to the economy, much of the agricultural potentials remain untapped. For instance, in 2008, 23,530 hectares of arable land were cultivated.

Crop Production

83. Soils favour the production of variety of crops. Presently, the main food crops cultivated in commercial quantities include maize, plantain, cassava, yam, cocoyam, tomatoes and pepper. The municipality is also known for the production of cocoa and coffee. The table indicates the estimated total crop area for major crops and output in the municipality.

Table 13: Estimated total crops area and output for major crops in the Municipality in 2008

Major Crops Grown	Area Cultivated per Crop	Output/Crop (metric
	(Ha)	tonnes)
Maize	29,800	208,697
Cassava	174,375	697,500
Cocoyam	16,950	67,800
Plantain	44,000	220,000
Yam	8,704	17,408
Rice	1,100	4,400

Source: MADU, Dormaa Municipal Office, 2010

Post-Harvest Losses

84. Post-Harvest losses are a common phenomenon and represent a major challenge to farmers in the municipality. The incidence of post harvest losses is particularly very high for crops as plantain and cassava and the highly perishable crops like tomatoes. These losses are as a result of inadequate appropriate storage facilities.

The high incidence of crop losses affects the incomes of farmers and poses as disincentive to farmers who are interested to embark on large-scale production.

Livestock and Poultry Production

85. At the moment the poultry industry specifically table egg production is operating at a large scale levels. Poultry production in the municipality is the largest in the region. The poultry sector also employs a high proportion of the municipality's labour force. Livestock such as cattle, sheep, goats and grass cutters are also reared.

Туре	Number
1. Chicken (Exotic Breed)	3,017,402
2. Cattle	3,253
3. Sheep	10,691
4. Goats	17,596
5. Pigs	2,806
6. Guinea Fowl	178
7. Ducks	932
8. Turkey	557
9. Chicken (Local Breed)	30,455

Table 14: Livestock and Poultry Production in the Dormaa Municipality in 2008

Source: MADU, Municipal Office, 2010

86. Major challenge of the industry is finding enough market outlets for the products and credit facilities to expand the farms to employ more people.

Agricultural Extension Agents (AEAs)

87. Both livestock and crop production in the municipality is affected by the inadequate agricultural extension services. The municipality has eleven (11) agricultural extension agents who attend to about 56,413 farmers spread over 32 extension operational areas. This indicates that the extension agent: farmer ratio is 1:5,128. This appalling situation is compounded by the inadequacy of motor bikes and other logistics which hamper the mobility of the few AEAs to most parts of the municipality.

Major Crops	Percentage of Post Harvest Losses
Maize	8%
Yam	5%
Cocoyam	3%
Cassava	40%

Table 15: Incidence of Post-Harvest losses among major crops

Source: MADU, Municipal Office, 2010

Agro-Processing

88. Over the years, some efforts have been made by individuals, groups and the Municipal Assembly to add value to farm produce through processing. Agroprocessing is currently on a small-scale.

Agricultural Land Acquisition

89. Ownership of land in the municipality is vested in the stool and held in trust and on behalf of the people. For agricultural purposes, it can easily be accessed by both natives and non-natives. This is a great potential for agricultural development. In line with local customs and traditions, non-natives in need of land for agricultural purposes are required to approach a chief or the appropriate landlord/landlady with drinks and/or specified amount of money for a parcel of land. The lease period ranges between few months for food crops and several years for cash crops.

Marketing Centres and Days in the Municipality

Large settlements like Dormaa Ahenkro and Nkrankwanta observe daily markets as well as weekly markets. The table below shows the days of some major markets in the municipality.

	Type of Marketing and Days							
Town	Daily	Weekly and Day Observed						
Dormaa Ahenkro	Daily	Tuesdays						
Kofibadukrom	Daily	Fridays						

Table 16: Major Market Towns and Days

Source: MPCU, DMA, Municipal Office, 2010

Key Agricultural Development Problems

90. Problems that beset agriculture as a whole in the municipality include the following:

(a) Rain-fed Agriculture

The entire agriculture activities depend on rainfall. It fails woefully when rains also fail.

(b) Bush Fires

Incessant annual bush-fires are destroying the vegetation and soil fertility causing several streams to disappear, rendering food security almost impossible. At any given moment, it renders more than 30% of the food crops un-harvested remain in the fields.

(c) Inadequate Credit Facilities

Credit facilities are meagre, untimely and have very unattractive interest rate and conditions as far as agriculture is concerned.

(d) Inadequate Marketing and Distribution Outlets

Even though the municipality is blessed with dual markets (Ghana and La Cote d'Ivoire) there is usually glut during the peak production period leading to losses to the farmers and deterioration of perishable crops.

(e) Inputs Supply

Apart from being expensive, inputs supply is not reliable and distribution of inputs stores sparse.

(f) **Personnel/Logistics**

Inadequate Agric Extension Agents coupled with the inadequate number of logistics such as motorbikes and vehicles has compounded the problems that hamper the growth of the agricultural sector in the municipality.

Key Agricultural Development Potentials

- 91. **(a)** Agriculture has almost unlimited potential for job creation, especially for the youth in the municipality because of the following reasons.
 - Bimodal rainfall, which is evenly distributed throughout the year.
 - Presence of rivers and rivulets criss-crossing the municipality
 - Intensively cultivable forestland, broken forest, unused forest and grassland.
 - Favourable soil types, which support both plantations and food crops.
 - Rich in ground water resources, which can be drilled for small-scale irrigation schemes.
 - Farm manure from medium to large-scale poultry farms can be used as organic manure for farming.
 - Presence of youthful population to undertake agricultural ventures.
 - Presence of dual markets for agricultural produce (the municipality shares common border with La Cote d'Ivoire at different entry points).
 - Capacity of the municipality to produce fresh tomatoes to serve tomato processing/canning factory at Wenchi and other parts of the country.
 - The municipal capital is connected adequately to market centres such as Accra, Kumasi Tamale, Takoradi and Tema etc.
 - Road network is good for transportation of agricultural produce.

- Topography is gentle sloping and problems associated with erosion are very minimal.
- Availability of electricity for any agro-based industry.
- Availability of all year round water supply for any agro based industry.
- (b) It is a reliable springboard for industrial take-off in the municipality especially agro based industries.
- (c) It has potential for the export of several non-traditional commodities –
 e.g. honey, mushroom, organically produced vegetables and snails.

SPATIAL DEVELOPMENT

92. This section discusses the spatial organisation of settlements in the municipality. It provides summary of the socio-economic – profile within the spatial context. Further, it deals with the type, number, distribution of facilities and services and how these factors ultimately shape the hierarchy of settlements in the municipality.

Settlement Pattern

- 93. The spatial pattern of settlement in the municipality could generally be described as nucleated with the exception of few settlements located along the major Dormaa Ahenkro Nkrankwanta trunk road. There are only four urban settlements in the municipality namely Dormaa Ahenkro and Amasu.
- 94. Currently, the highway indicated above is the only longest tarred road within the municipality. The nature of the settlement pattern coupled with generally low population thresholds of these settlements has made it very expensive and difficult to economically distribute projects including improvement of road networks in the municipality.
- 95. The municipality has three appreciable settlement deficiency areas, which include the Pamu-Berekum Forest Reserve to the north-east, the Tain II Forest Reserve in the east and the Mpameso Forest Reserve in the south. Most of the 293 settlements are located in the area lying in between the three forest reserves and these areas are well endowed with arable agricultural land for both food and cash crop. Its non-agricultural resources include gold, diamond, sand and clay deposits as well as timber. The area therefore has a potential for further settlement growth and concentration. A minor, but, significant concentration is found in the extreme southern part of the municipality which has its border with the Western Region of Ghana. The main settlement here in terms of size and functions is Nkrankwanta.

Location and Distribution of Services

96. In addition to population distribution in space, analysis was made on the distribution, level, and the variety of functions performed by the twenty major settlements in the Dormaa municipality and their spatial linkages. In all, 26 services were considered from the various sectors of the municipality's economy, namely commerce, transport (road), communication, culture, security, public administration, education, health and agriculture. The distribution of these services over the 20 major settlements as well as the spatial location of the settlements is shown in figure 7

Challenges in Revenue Mobilisation

- 97. Most of the sources are unproductive or are low yielding, and capacity of revenue collectors is low in terms of skills and logistics. Most taxable concerns still remain outside the municipality's revenue books.
- 98. At the moment, with technical support from a Consultant, the Municipal Assembly is in the process of up-dating data on property owners and economic activities operators to facilitate the stepping-up revenue collection in the municipality.

The Legal System

- 99. On the legal front, there is one main court in the municipality. That is, a Magistrate Court located at Dormaa Ahenkro. The Court is very efficient and reliable in that cases are normally promptly disposed off except on few occasions where prosecutors and/or defence lawyers seek adjournments due to non-availability of witnesses or to be well briefed by their clients. At present, the court has a resident judge at post.
- 100. Such efficiency and reliability boost the confidence of the civil society in the judicial system and tends to promote development as investors' confidence is also greatly enhanced.

	Estimated Financing Surplus / By Strategic Objective Summary	Deficit - (All In-Flow	'S)	In GH¢
Object		Expenditure	Surplus / Deficit	%
