Foreword

The 2021 Annual Public Debt Report (APDR) is the sixth consecutive report to be submitted to Parliament, in fulfilment of Section 72 of the Public Financial Management (PFM) Act, 2016 (Act 921). This report recounts all major debt management activities performed during the 2021 financial year, taking into account the debilitating effect of the 2019 Coronavirus Disease (COVID-19) on debt operations. A comprehensive analysis of the total public debt portfolio, including contingent liabilities, is also provided to enhance transparency in Ghana's public debt management operations.

The focus of Government's fiscal policy over the past three (3) years was to achieve fiscal and debt sustainability, while also ensuring robust and inclusive economic growth. Prior to the emergence of the COVID-19 pandemic, the Ghanaian economy was characterised by the following: robust growth rates which averaged about 7.0 percent; low and stable single-digit inflation rates; fiscal deficit within the fiscal responsibility threshold of 5.0 percent of Gross Domestic Product (GDP); and a public debt-to-GDP ratio which was well under control.

The emergence of the COVID-19 pandemic, however, presented a new source of risk to the Ghanaian economy. Apart from disrupting the global supply chains, the pandemic also adversely affected every sector of the Ghanaian economy. The most heavily-impacted sectors include: hotel and hospitality industry; trade and industry; agriculture; health; educational services; real estate; financial; and transportation services, particularly aviation. The toll on households was equally grave and has, for the most part, contributed to significant job losses in almost all sectors of the economy. As a result, Parliament had to suspend the fiscal rules under the Fiscal Responsibility Act (FRA), 2018 (Act 982)—which capped the annual fiscal deficit at 5.0 percent of GDP and also required the maintenance of a positive primary balance.

Government's effort to save lives and livelihoods during the COVID-19 pandemic put severe pressure on public finances, resulting in higher than programmed budget deficit and public debt levels. For instance, the fiscal deficit, which stood at 4.8 percent of GDP in 2019 rose to 11.7 percent of GDP in 2020, before declining to 9.6 percent of GDP in 2021. The unprecedented fiscal stimulus needed to shorten the impact of the global recession and avoid debilitating growth outcomes triggered a surge in sovereign debt levels around the world. Ghana was not spared from these global developments: the country's public debt-to-GDP ratio rose from 62.4 percent in 2019 to 76.1 percent in 2020, reaching 80.1 percent in 2021; and economic growth declined to 0.4 percent in 2020, from 6.5 percent in 2019.

In the quest to restore the economy to pre-COVID-19 growth levels, Government launched the GH¢100.0 billion Ghana COVID-19 Alleviation and Revitalisation of Enterprises Support (CARES) "Obaatan Pa" programme to mitigate the impact of the pandemic on the Ghanaian

economy and ensure a stronger and a more resilient economy. The Ghana CARES programme is already yielding positive results.

Provisional GDP data for the first three (3) quarters of 2021 indicated that the economy had expanded at an annual average of 5.2 percent while the non-oil sector growth averaged 6.9 percent. The Bank of Ghana (BoG) complemented Government's fiscal policy measures by implementing appropriate monetary policy measures to ensure price and exchange rate stability.

In 2021, Ghana returned to the International Capital Markets (ICM) as the first sovereign in Sub-Saharan Africa (SSA) since the onset of the COVID-19 pandemic to issue United States Dollar (USD) bonds, with the order book peaking at US\$6,200.0 million, which was a commendable achievement amid a global pandemic. The transaction included a 4-year zero-coupon tranche, which was an innovative market-oriented solution to address post-COVID-19 challenges and improve the cash flow required for debt servicing and liability management. Ghana was the first emerging market sovereign to add a zero-coupon bullet tranche to its bond financing portfolio. This historic transaction strongly signaled investors' confidence in Ghana's fiscal consolidation programme for economic recovery and growth.

Despite the challenging global financing conditions, Ghana's medium-term prospects remain bright, bolstered by the recovery of prices for its main export commodities on international markets and Government's clear commitment to fiscal consolidation through aggressive domestic revenue mobilisation and expenditure rationalisation to achieve efficiency and ensure value for money. We are confident that the revenue measures outlined in the 2022 Budget Statement and Economic Policy will help to generate the much-needed domestic revenue to support our development agenda. The fiscal balance is also expected to return to the fiscal responsibility threshold over the medium-term.

Right Honourable Speaker, I am pleased to table the 2021 Annual Public Debt Report before Parliament for the consideration of Honourable Members.

God bless!!!

Ken Ofori-Atta

Minister for Finance

Executive Summary

The year 2021 was particularly difficult for the global economy. Economic recovery was hampered by financial stress, occasional flare-ups of the COVID-19 pandemic, and lingering bottlenecks in global supply chains. In particular, the World Bank estimated that output and investments in emerging economies, including Ghana, would remain below pre-pandemic levels, largely due to tighter fiscal and monetary policies.

In 2021, Ghana's economy continued to recover from the COVID-19 pandemic, spurred by strong fiscal consolidation measures aimed at containing the effects of the pandemic, keeping economic activities robust, and anchoring macroeconomic gains. These measures contributed to a sharp rebound of output in 2021 with an estimated healthy real GDP growth of 5.2 percent through the first three quarters

The major focus of Government's debt management strategy in 2021 was to continue with the ongoing liability management programme to reduce refinancing and interest rate risks in the portfolio. In light of the adverse spillover effect of the pandemic, Government issued Eurobonds on the ICM, new instruments on the domestic market, and reopened medium-term instruments to raise adequate financing to support the budget.

The provisional stock of outstanding public debt as at end-December 2021 was GH¢351,787.0 million (US\$58,640.0 million), comprising external debt of GH¢170,009.8 million (US\$28,339.2 million) and domestic debt of GH¢181,777.2 million (US\$30,300.8 million), respectively. As a percent of GDP, the debt-to-GDP ratio was 80.1¹ percent at end-December 2021, up from the 76.1 percent recorded in 2020. This was mainly attributed to the financial sector clean-up cost, energy sector payments to Independent Power Producers (IPPs), and COVID-19 related expenditures.

In addition, interest rates in the money market generally trended downwards in line with easing inflation expectations and the reduction of the BoG's Monetary Policy Rate (MPR). The rate on the 91-day Treasury Bill (T-bill) declined by 160 basis points from 14.09 percent as at end-December 2020 to 12.49 percent as at end-December 2021. Similarly, the interbank weighted average interest rate decreased by 88 basis points, from 13.56 percent recorded in December 2020 to 12.68 percent over the same period. The average lending rate of Deposit Money Banks (DMBs) also declined to 20.04 percent in December 2021 by

¹ Based on provisional GDP figure of GH¢439,381.4 million

106 basis points from 21.10 percent recorded in the corresponding period in 2020, consistent with developments in the interbank market.

Sections 67, 73, and 76 of the PFM Law require a credit risk assessment to be conducted to ascertain the creditworthiness of all public entities before granting them financial support, in order to minimise the fiscal risks to Government that could arise from these public entities. In 2021, nine (9) entities were assessed based on different request lines. In addition, credit risk assessments were conducted on four (4) entities in the energy and aviation sectors seeking payroll support to address their short-term and medium-term financial challenges.

Government continued with efforts to bailout depositors and investors of failed financial institutions, following completion of the bailout exercise in the banking sector at the end of December 2020. Thus, the bailout for investors of the failed Fund Management Companies (FMCs), which started in 2020, continued in 2021. During the year under review, Government provided bailout packages to settle claims of investors of sixteen (16) failed FMCs for which liquidation orders had been obtained. Partial payments were also made on validated claims of customers of another seventeen (17) FMCs for which liquidation orders were still pending at the courts. This was done on humanitarian grounds to provide relief for investors who had gone a year without any payments.

Government is committed to pursuing appropriate fiscal consolidation measures to ensure a sustainable level of public debt, while also safeguarding macroeconomic stability through fiscal discipline and prudent debt management.

Section One: Introduction

- 1. The 2021 APDR prepared by the Ministry of Finance (MoF) presents major developments in Ghana's public debt management activities during the financial year ended 31st December, 2021.
- 2. Pursuant to Section 72 of the PFM Act, the report is the sixth in the series following the passage of the Act. The preparation of the APDR is aimed at informing Parliament, the general public, and other stakeholders including lenders and investors in Government securities on actual borrowing and use of funds, changes in Government's public debt portfolio, as well as the steps taken to manage the portfolio.
- 3. The APDR comprehensively covers all Public and Publicly Guaranteed (PPG) debt (herein after referred to as Public Debt) and also provide highlights on other financing arrangements.
- 4. The provisional public debt-to-GDP ratio saw an increase from 76.1 percent recorded in 2020 to 80.1 percent in 2021. The rise in the debt stock in 2021 was partly due to financial sector clean-up costs, energy sector payments, and COVID-19 related expenditures.
- 5. The continued adverse effects of the pandemic necessitated the access to the ICM to raise the required financing to support the budget. Government was able to issue a 4-tranche Eurobond with a face value of US\$3,025.0 million. This included the country's first zero-coupon bond, which was an innovative financing instrument to create fiscal space via reduced interest cost over the medium-term. The transaction also marked the first sovereign USD bond issuance in SSA since the onset of the pandemic.
- 6. As part of measures to further mitigate the impact of the COVID-19 pandemic on lives and livelihoods, Ghana received its share of Special Drawing Rights (SDR) allocation from the International Monetary Fund (IMF), in addition to the usual sources of financing.
- 7. This report provides details of performance outcomes for the year 2021 and outlook for the medium-term. The sections in the report focus on:
 - macroeconomic developments;
 - implementation of the 2021 debt management strategy;
 - Government borrowing and financing operations;
 - public debt developments;
 - liability management operations;
 - contingent liabilities;
 - other financing arrangements;
 - debt management strategy for 2022;
 - · debt sustainability analysis; and
 - debt management reforms and initiatives.

Section Two: Macroeconomic Developments for 2021

Global Economic Developments

- 8. Global economic recovery efforts improved in 2021 despite the surge in the COVID-19 pandemic with the rapid spread of new variants.
- 9. The January 2022 World Economic Outlook (WEO) released by the IMF estimated global output growth of 5.9 percent in 2021, 0.5 percentage points lower than the October 2021 WEO update and a significant improvement over the contraction of 3.1 percent in 2020.
- 10. Economic activity in SSA grew by 4.0 percent in 2021, a significant improvement over the contraction of 1.7 percent during the previous year, supported by the removal of some COVID-19 restrictions, policy support, and higher commodity prices on international markets.
- 11. Global financial conditions tightened in emerging market and developing economies due to policy rate hikes to contain price pressures and outflows triggered by country-specific vulnerabilities, as well as the expectation of policy rate hikes in advanced economies and a strong dollar. The tightening of global financial market conditions worsened the outlook for several African countries, leading to credit downgrades by rating agencies.

Domestic Economic Developments

- 12. On the domestic front, the economy continued its strong recovery from the COVID-19-related economic downturn. The recovery is underpinned by Government's decisive measures aimed at fiscal consolidation and anchoring macroeconomic gains, while at the same time containing the effects of the pandemic and keeping economic activities robust. These measures contributed to a sharp rebound of output in 2021. A summary of macroeconomic performance is highlighted as follows:
 - overall real GDP grew by an average of 5.2 percent for the first three quarters of 2021 against the annual target of 4.4;
 - non-oil GDP grew by an average of 6.9 percent for the same period in 2021;
 - end-December 2021 inflation was 12.6 percent, compared to 10.4 percent in the same period in 2020;
 - overall budget deficit (cash basis) end-December 2021 was 11.9 percent of GDP, against a target of 12.1. percent and compared to 15.0 percent of GDP recorded for the same period in 2020. Excluding financial and energy sector bailout costs, the overall budget deficit (cash basis) was 9.6 percent against a target of 9.4 percent;
 - the primary balance registered a deficit of 4.3 percent of GDP in 2021, compared to 8.6 percent of GDP for the same period in 2020. Excluding financial and energy sector bailout costs, the primary balance was 2.0 percent at end-December 2021.

- provisional public debt as a percentage of GDP stood at 80.1 percent as at end-December 2021, up from 76.1 percent of GDP at end-December 2020, reflecting the impact of COVID-19 pandemic expenditures, financial sector clean-up costs and energy sector payments to IPPs;
- MPR was largely maintained at 14.5 percent in 2021, same as the end-2020 figure;
 and
- Gross International Reserves (GIR) was equivalent to 4.4 months of import cover at end-December 2021.

Real Sector Performance

13. Provisional estimates released by the Ghana Statistical Service (GSS) in December 2021 showed that overall real GDP growth for the first three (3) quarters of 2021 averaged 5.2 percent, compared to the projected growth of 4.4 percent and the 0.6 percent contraction recorded for the first three (3) quarters in 2020. Non-oil GDP growth for the first three (3) quarters of 2021 averaged 6.9 percent, compared to the annual target of 5.9 percent and 0.3 percent contraction for the same period in 2020 (Table 2.1).

^{*}Revised figures

^{**}Provisional GSS data for 2021 Q1 to Q3

^{***}Projected end-year estimates

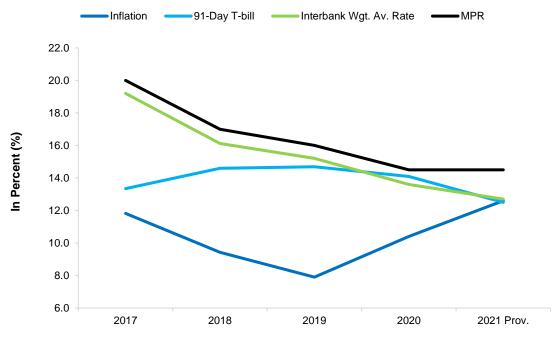

^{****}Excludes financial sector bailout and energy sector bailout costs

14. The pick-up in growth performance indicates signs of strong recovery in economic activities in most sectors of the economy.

Inflation

- 15. The year-on-year Consumer Price Index (CPI) inflation declined from 10.4 percent in December 2020 to 7.5 percent in May 2021. The price developments between the months of January and May 2021 were characterised by sharp disinflation on the back of wellanchored inflation expectations, exchange rate stability, and favourable food price base drifts carried over from 2020.
- 16. However, inflation picked up to 10.6 percent in September 2021 on account of shocks from domestic fuel price adjustments and increasing domestic food prices arising from climate related factors such as delayed harvest, and world food price increases. Inflation further rose to 11.0 percent in October 2021 driven by non-food inflation on account of price increase in the transport and housing and utility components of the CPI, closing the 2021 financial year at 12.6 percent.
- 17. At end-December 2021, the MPR was maintained at 14.50 percent from the end-December 2020 figure. However, the MPR was reduced by 100 basis points to 13.50 percent in May 2021 on account of favourable inflation expectations and as an additional measure to support the recovery of economic activity from the COVID-19 pandemic. The MPR remained unchanged until November 2021 when it was increased again to 14.50 percent on the back of expected price pressures.

Figure 2.1: Inflation, MPR, Interbank Weighted Avg. & 91-Day T-Bill Rates, 2017 – 2021

Source: Ministry of Finance, Bank of Ghana and Ghana Statistical Service

18. Interest rates in the money market broadly declined in line with easing inflation expectations and the MPR in 2021. The rate on the 91-day T-bill declined by 160 basis points to 12.49 percent as at end-December 2021 from 14.09 percent as at end-December 2020. The interbank weighted average interest rate also decreased by 88 basis points, from 13.56 percent recorded in December 2020 to 12.68 percent over the same period under review, reflecting the cut in the MPR in May 2021. Consequently, the average lending rate of DMBs also declined to 20.04 percent in December 2021 by 106 basis points from 21.10 percent recorded in the corresponding period in 2020, consistent with developments in the interbank market.

External sector

- 19. The trade balance for the period remained in surplus but narrowed to US\$1,107.6 million in 2021 (1.5% of GDP), compared to US\$2,043.0 million (3.0% of GDP) in the corresponding period of 2020, mainly on account of higher imports outturn driven by increased demand for refined petroleum products. This surplus, together with higher investment income outflows, profits and dividend repatriation, resulted in a current account deficit of US\$2,497.3 million (3.3% of GDP) at end-December 2021 compared with US\$2,134.0 million (3.1% of GDP) same time last year.
- 20. During the year, there were significant inflows into the financial and capital account

amounting to US\$3,268.8 million. Major sources of inflows largely included Investment Foreign Direct (FDI). These inflows were more than enough to offset the current account deficit resulting in an overall balance payment surplus US\$510.1 million at the end of 2021 (Table 2.2).

Table 2.2: Balance of Payments, 2020 & 2021

Description	2020*	2021 Prov.		
Description	(in millions of US\$)			
Current Account Balance	(2,134.0)	(2,497.3)		
Trade Balance	2,043.0	1,107.6		
Financial and Capital Account	2,887.2	3,268.8		
Net Errors and Omissions	(375.8)	(261.4)		
Overall Balance	377.5	510.1		

Source: Bank of Ghana *Revised figures

21. As a result, the stock of GIR improved to US\$9,695.2 million as at end-December 2021, equivalent to 4.4 months of import cover. This compares with the reserve level of US\$8,624.4 million (4.0 months of imports) as at end-December 2020.

Exchange Rate Developments

- 22. The foreign exchange market was relatively stable, and the local currency performed better in 2021 than in 2020. Notwithstanding pressures from corporates, energy-related forex demand, and pandemic-induced portfolio outflows, the currency was supported by improved forex inflows, largely from mining and remittances.
- 23. Cumulatively, the Ghana Cedi depreciated against the USD and the Great British Pound (GBP) by 4.09 percent and 3.11 percent respectively but appreciated by 3.46 percent

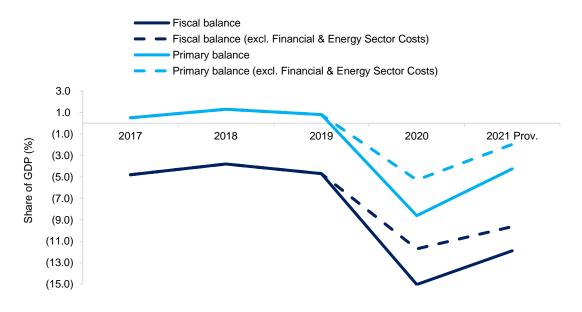

against the Euro (EUR) in 2021. This compares with the depreciation of 3.93 percent, 7.08 percent and 12.07 percent for the USD, GBP and EUR, respectively, during the same period in 2020.

Fiscal Performance

- 24. Provisional data on Government fiscal operations in 2021 indicated an overall deficit of GH¢52,200.8 million (11.9% of GDP) including financial bailout, bank capitalization and IPPs, against a target of GH¢53,372.9 million (12.1% of GDP), a reduction from the 2020 deficit of GH¢57,634.5 million (15.0% of GDP). Excluding financial bailout, bank capitalization and IPPs, however, the overall deficit was GH¢42,354.7 million (9.6% of GDP). The outturn for revenues and grants amounted to GH¢69,239.2 million (15.8% of GDP) in 2021, 4.5 percent below the programmed target of GH¢72,477.4 million (16.5% of GDP). Total expenditures (incl. arrears clearance) amounted to GH¢111,593.8 million (25.4% of GDP), also below the programmed target of GH¢113,750.2 million (25.9% of GDP) by 1.9 percent. The shortfall in revenue was, however, higher than the reduction in expenditure, resulting in the overall budget deficit, although it compares favourably to the deficit recorded for the same period in 2020 (Figure 2.2).
- 25. The revenue shortfall, together with adjustments in interest payments and the allocation to employees, to reflect the 2021 negotiated public sector wage adjustments, resulted in a primary deficit of GH¢18,678.2 million (4.3% of GDP) including financial bailout, bank capitalization and IPPs, and GH¢8,832.1 million (2.0% of GDP) excluding financial bailout, bank capitalization and IPPs.

Figure 2.2: Fiscal and Primary Balances, 2017 - 2021

Source: Ministry of Finance

26. The nominal public debt stock as at end-December 2021 was GH¢351,787.0 million (US\$58,640.0 million), representing 80.1 percent of GDP. However, excluding financing

costs associated with energy sector bailouts and financial sector cleanup, the stock of debt amounts to GH¢325,694.3 million (US\$54,290.5 million), representing 74.1 percent, as at end-December 2021.

Section Three: 2021 Medium-Term Debt Management Strategy

- 27. In line with Government's objective of ensuring debt sustainability over the medium-term, the 2021 Medium-Term Debt Management Strategy (MTDS) focused on an appropriate financing mix to minimize the costs and risks that could adversely affect the debt portfolio. It also sought to continue Government's ongoing liability management programme to reduce refinancing and interest rate risks in the portfolio.
- 28. Other objectives of the strategy were the extension of the maturity profile, introduction of new instruments, and effective communication with the markets.
- 29. On the domestic front, the financing strategy sought to build benchmark bonds by issuing or reopening medium to long-term bonds to improve liquidity and secondary market trading.
- 30. On the external front, Government planned to issue bonds on the ICM, contingent on favourable market conditions, to finance some growth-oriented projects and programmes and carry out liability management operations.
- 31. Considering the materialisation of significant contingent liabilities in recent years, the strategy further took into account certain contingent liabilities that could crystallize from the financial and energy sectors in 2021.
- 32. In line with the above, Government issued a 4-tranche Eurobond with a face value of US\$3,025.0 million in March 2021 on the ICM. The transaction had a debut 4-year zero coupon bond of US\$525.0 million. In addition to this, three (3) regular tranches—consisting of US\$1,000.0 million, US\$1,000.0 million, and US\$500.0 million in 7-year, 12-year, and 20-year bonds—were issued and priced at coupon rates of 7.750 percent, 8.625 percent, and 8.875 percent, respectively.
- 33. Out of the total actual Eurobond proceeds of US\$2,883.3 million, an amount of US\$1,500.0 million was used to support the implementation of the 2021 Budget. Government through its ongoing liability management programme also bought back US\$117.3 million of the 2023 maturing Eurobond and used an amount of US\$1,257.4 million for further liability management operations (Section 6 of this report provides details of the liability management operations conducted).
- 34. In 2021, Government issued new instruments, namely: a 5-year zero coupon bond (introduced for the financial sector cleanup exercise); a 5-year USD bond; and a 6-year bond using the book building process to diversify the domestic debt portfolio. Tap-ins were also done on medium-term instruments to build benchmark domestic bonds.
- 35. A total of GH¢6,938.2 million in medium-term instruments and cash were used by Government to cover IPP payments. About GH¢3,483.1 million was also issued by

Government to bailout investors of some FMCs in the financial sector. The total cost involved in addressing the bailout and crystallisation of contingent liabilities from the financial and energy sectors was, however, significantly below the provision of GH¢12,000.0 million made in the strategy for possible materialisation of contingent liabilities.

- 36. The COVID-19 pandemic had an adverse effect on public debt sustainability in 2021. To bring debt levels back onto a sustainable path, nominal limits were placed on concessional and non-concessional external borrowing to support the reduction in the rate of debt accumulation. Total new concessional and non-concessional debt of US\$2,842.4 million was contracted as at end-December 2021, exceeding the target of US\$2,500 million. The limit set for non-concessional borrowing from the ICM was US\$3,000.0 million with an option to increase it to US\$5,000.0 million, of which Government raised an amount of US\$3,025.0 million due to market conditions.
- 37. The implementation of the strategy is evidenced in the costs and risks indicators of the public debt portfolio (Table 3.1).

Table 3.1: Cost and Risk Indicators

Blat to Passes		Extern	al Debt		estic ebt	Total	Debt
Risk Indicator	S	2020*	2021 Prov.	2020*	2021 Prov.	2020*	2021 Prov.

Source: Ministry of Finance

- 38. The debt management strategy applied in 2021 resulted in some improvements in the costs and risks indicators of the existing debt portfolio, amidst volatile market conditions emanating from the lingering effects of the COVID-19 pandemic.
- 39. Accordingly, the weighted average interest rate of domestic debt at the end of 2021 was 17.9 percent, a decrease from the end-December 2020 rate of 18.3 percent. The weighted average interest rate for external debt increased from 5.0 percent in 2020 to 5.2 percent in 2021. Overall, the weighted average interest rate for the total debt portfolio was 11.3 percent as at end-December 2021 (Table 3.1).
- 40. The Average Time to Maturity (ATM) for domestic debt reduced from 3.3 years as at end-December 2020 to 3.2 years as at end-December 2021 due to high issuance at the shorterend of the market.

- 41. Notwithstanding the heightened difficulties of sourcing long-term financing on the ICM due to dried down liquidity for developing and frontier economies as a result of the COVID-19 pandemic, the ATM for the external debt saw an improvement to a level of 14.8 years as at end-December 2021 compared to 12.7 years as at end-December 2020.
- 42. However, the domestic debt maturing within one (1) year decreased to 30.5 percent, mainly due to the shift in investor preference towards shorter tenor securities and the uncertainties emanating from the COVID-19 pandemic, as well as underperformance of Government revenue which resulted in Government resorting to higher domestic short-term financing.
- 43. Interest rate risk for the domestic debt portfolio worsened whereas that of external was moderate. For domestic debt, the Average Time to Re-fixing (ATR) was 3.2 years, whereas about 30.5 percent of the portfolio will be re-fixed within a year, partly due to taps into instruments with shorter maturities. About 13.0 percent of total external debt is expected to be re-fixed within one (1) year, compared to the end-December 2020 proportion of 11.4 percent. This is mainly attributed to fixed-rated loans, including debt owed to multilateral and bilateral creditors and foreign investors in the external debt portfolio.
- 44. The share of foreign currency debt in the total debt portfolio decreased marginally to 51.3 percent as at end-December 2021, compared to 51.4 percent as at end-December 2020. The main exposure of the debt portfolio is to the USD and EUR, which made up about 71.4 percent and 17.7 percent of the external debt stock, respectively.
- 45. Strategic benchmarks were set out in the 2021 MTDS to monitor and mitigate risks embedded in the public debt portfolio. As shown in Table 3.2, refinancing risk for the entire debt portfolio performed considerably well relative to the set target, with the share of debt maturing in one (1) year decreasing to 13.1 percent whereas the ATM improved from 9.2 years in 2020 to 10.6 years as at end-December 2021. This was because one of the 4-tranche Eurobond issuances had a maturity of twenty (20) years. Debt re-fixing in one (1) year, which looks at variable-rated debt in the portfolio (including short-term domestic debt and floating rate debt in the external debt portfolio), was 19.4 percent and within the target of less than or equal to 30.0 percent. All of the proposed targets were achieved.

Table 3.2: Performance Indicators of MTDS, 2020 & 2021

Risk Indicators		2020*	2021 Target	2021 Prov.
Refinancing Risk	Debt Maturing in 1 Year (% of Total)	15.1	15 - 20	13.1
Reiliancing Nisk	Average Time to Maturity (ATM) - Years	9.2	≥ 8	10.6
Interest Rate	Debt Refixing in 1 Year (% of Total)	20.1	≤ 30	19.4
Risk	Floating Rate Debt (% of Total External Debt)	11.9	15 - 20	13.1
FX Risk	USD Debt (% of External Debt)	70.0	70 ± 5	71.7

Source: Ministry of Finance

Section Four: Government Borrowing and Financing Operations

- 46. Government's borrowing plan in 2021 was guided by the revised 2021 fiscal deficit of GH¢41,272.9 million (9.4% of GDP), of which GH¢26,506.5 million was to be financed from domestic sources and GH¢15,874.3 million from foreign sources (Table 4.1).
- 47. The provisional outturn for net foreign financing amounted to GH¢20,082.1 million, exceeding the target by 26.5 percent. The increase was on account of lower than expected amortisation and higher than anticipated disbursements from loans.
- 48. The actual Net Domestic Financing (NDF) amounted to GH¢21,987.8 million against the revised target of GH¢26,506.5 million. This was below the revised target by 17.0 percent. The NDF included drawdowns in Government deposits at BoG and banks, domestic bond market operations, and other sources of domestic financing.
- 49. Financing of the 2021 deficit was also augmented using part of the IMF SDR inflows (Exceptional financing) of GH¢1,779.5 million which constitutes 4.2 percent of total financing.

Table 4.1: Summary of Government Financing Operations, 2020 & 2021

Description	2020*	2021 Revised Budget	2021 Prov.	% Dev. From Budget

*Revised figures

Gross Domestic Debt Issuance

- 50. The gross domestic debt issuances on the domestic market were largely undertaken to finance the 2021 budget, rollover maturities, and build cash buffer.
- 51. The actual gross domestic issuances increased by 3.2 percent from the 2020 outturn of GH¢107,103.9 million to GH¢110,505.6 million in 2021. Of this

Table 4.2: Gross Domestic Issuance (Marketable & Non-Marketable), 2020 & 2021

		2021
Description	2020*	Prov.
	(in million	s of GH¢)
Gross Domestic Issuance	107,103.9	110,505.6
o/w Maturities	62,864.6	80,280.2
o/w Net Issuance	44,239.3	<i>30,225.4</i>

Source: Ministry of Finance

amount, GH¢80,280.2 million was used to roll over maturing bills and the remaining GH¢30,225.4 million to finance Government operations (Table 4.2).

- 52. In line with the 2021 Annual Borrowing Plan (ABP) and the debt management objective of developing the domestic debt market, Government planned to issue a range of instruments (securities) of different tenors with their respective issuance percentages:
 - Short-tem securities² 18.3%;
 - Medium-term securities³ 69.4%; and
 - Long-term securities⁴ 12.3%.
- 53. Compared with the planned issuance, the actual proportion of short-term borrowing was higher at 53.8 percent due to investors' preference for shorter-dated instruments, while medium and long-term instruments accounted for 44.4 percent and 1.8 percent, respectively.
- 54. On net terms, short-term instruments amounted to GH¢5,755.9 million representing 19.1 percent of domestic issuances, while medium and long-term instruments amounted to GH¢23,132.8 million and GH¢1,336.7 million, representing 76.5 percent and 4.4 percent of the total domestic issuances, respectively.
- 55. There was strong demand for Government securities in the first quarter of 2021. However, the primary market witnessed uncovered auctions during the remaining quarters of the year, with the fourth quarter being the most pronounced. Out of a total of twenty-seven (27) weeks of uncovered auctions, eleven (11) were recorded in the last quarter. Government financing was, however, met through tap-ins and re-opens on existing instruments to the tune of GH¢28,841.8 million. As a result, Government's actual issuances were in excess of the issuance calendar target by 25.3 percent to finance the budget (Figure 4.1).

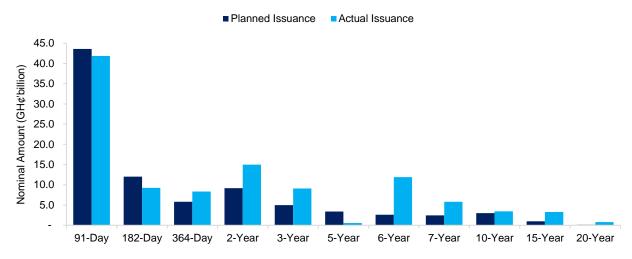

² Short-term securities are 91-, 182- and 364-day T-Bill

³ Medium-term securities are 2-year notes to 10-year bonds

⁴ Long-term securities are 15-year bonds and beyond

Figure 4.1: Planned Versus Actual Issuance for 2021

Source: Ministry of Finance

56. In addition to tap-ins and re-opens, the shortfalls were funded through the drawdown of Government account balances and utilisation of the liability management portion of the Eurobond proceeds. Government utilised GH¢7,203.3 million of the Eurobond proceeds earmarked for liability management to buy back some of the bonds maturing in the year and to make up a portion of the shortfalls.

Section Five: Gross Public Debt

- 57. Provisional nominal public debt as at end-December 2021 was GH¢351,787.0 million (US\$58,640.0 million), comprising external debt of GH¢170,009.8 million (US\$28,339.2 million) and domestic debt of GH¢181,777.2 million (US\$30,300.8 million), respectively, as indicated in Table 5.1. This represents an increase of 19.9 percent in the nominal stock, primarily on account of additions to both the external and domestic components of the stock.
- 58. The domestic debt stock compared to the external witnessed a relatively higher nominal increase, attributtable to net issuances of domestic instruments to pay down the cost incurred from the crystallisation of contingent liabilities in the energy sector and the financial sector bailout, while the external debt rose mainly on account of disbursements due on new and existing loans, the Eurobond issuance in March 2021, and fluctuations in the exchange rate over the period under review. Appendices 1A and 1B provide details on the total stock of debt.

Table 5.1: Gross Nominal Public Debt, 2017 – 2021

Dolot Turno	2017	2018	2019	2020*	2021 Prov.		
Debt Type	(in millions of GH¢)

Source: Ministry of Finance

*Revised figures

59. Total public debt-to-GDP ratio increased from 76.1 percent in 2020 to 80.1 percent as at end-December 2021 (Table 5.2). This ratio includes the energy sector bailout and financial sector cleanup costs. Excluding these bailouts, the debt-to-GDP stood at 74.1 percent of GDP. The share of external debt and domestic debt in the portfolio accounted for 48.3 percent and 51.7 percent, respectively.

Table 5.2: Annual Public Debt Ratios, 2017 - 2021

					2021	
Debt Type	2017	2018	2019	2020*	Prov.	
		(a:	s % of GDF	of GDP)		
External Debt	29.5	28.7	32.3	37.0	38.7

Total Public Debt	100.0	100.0	100.0	100.0	100.0	

Source: Ministry of Finance

60. The overall rate of debt accumulation in 2021 was 20.6 percent, compared to 33.6 percent in 2020. This notable decline in the rate of debt accumulation over the period was on account of Government's fiscal consolidation programme and lower than planned bailout costs estimated for 2021. The rate of debt accumulation without the bailout costs was 11.7 percent (Figure 5.1).

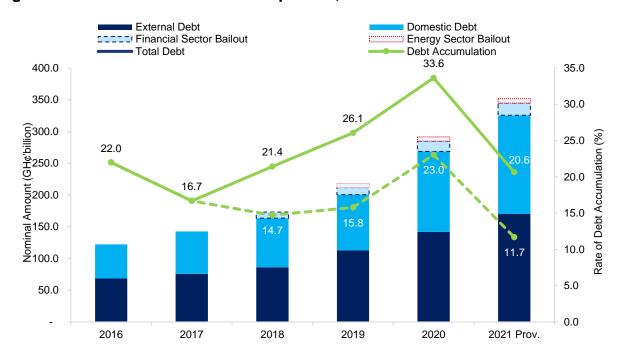

Figure 5.1: Gross Public Debt Developments, 2017 - 2021

Source: Ministry of Finance

Public Debt Dynamics

- 61. Movements in the stock of public debt are mainly driven by real GDP growth, price effects (interest rates and exchange rates), primary balance, and the crystallisation of contingent liabilities.
- 62. Over a 5-year period from 2017 to 2021, debt accumulation averaged 23.7 percent, compared to the nominal GDP growth average of 15.4 percent for the same period.
- 63. Interest rates on the 91-day T-Bill had been stable for four (4) consecutive years and reduced in 2021 with marginal impact on the domestic stock. Similarly, the interbank weighted average rate decreased in 2021, reflecting the stable monetary policy rate which remained unchanged over the period. However, interest rates on some medium-term securities (2-year and 5-year bonds) increased over the period, combined with significant increases in the stock of debt on these securities. Yields on Government securities in the secondary market also rose during the period under review.
- 64. During the first half of 2021, the Ghana Cedi slightly appreciated against the US Dollar by by 0.1 percent compared to a cumulative depreciation of 4.1 percent as at end-December

2021. Nonetheless, the depreciation of the exchange rate contributed to 26.3 percent of the build-up of nominal external debt in 2021 compared to 16.7 percent in 2020. Other factors that added to the accumulation in the stock of nominal external debt include disbursements on existing external debt and Eurobond issuances on the ICM. Consequently, the external debt-to-GDP ratio increased from 37.0 percent in 2020 to 38.7 percent at end-December 2021 (Figure 5.2).

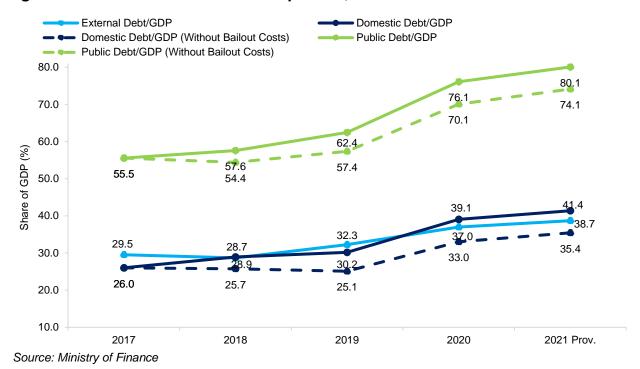

Figure 5.2: Gross Public Debt Developments, 2017 - 2021

- 65. Prior to the onset of the COVID-19 pandemic, the primary balance had been in a surplus for three (3) consecutive years, from 2017 to 2019. However, the pandemic derailed fiscal consolidation efforts as a result of reduced revenue collection and increased expenditure thereby pluging the primary balance into a deficit in 2020. While efforts to continue Government's fiscal consolidation programme are evident in the reduction of the primary deficit in 2021 to 2.0 percent of GDP from 5.3 percent of GDP at end-December 2020, the primary deficit nonetheless contributed to the increased rate of debt accumulation over the period.
- 66. The crystallisation of contingent liabilities from the energy and financial sectors also increased the debt stock and had an adverse impact on debt sustainability. As at end-December 2021, the debt-to-GDP ratio had increased significantly due to the impact of contingent liabilities that had accumulated since 2018. Specifically, contingent liabilities that were added to the debt stock in 2021 on account of the financial sector clean-up costs and energy sector bailout costs made up about GH¢3,483.0 million (0.8 percent of GDP) and GH¢6,938.2 million (1.6 percent of GDP), respectively.

External Debt Stock

67. The outstanding stock of external debt as at end-December 2021 was GH¢170,009.8 million (US\$28,339.2 million) relative to the end-December 2020 figure of GH¢141,796.8 million (US\$24,715.8 million), reflecting a nominal increase of 19.9 percent and 14.7 percent in Cedi and US Dollar terms, respectively. The increase was largely due to the proceeds of the Eurobond issuance on the ICM, SDR allocation, disbursements on commercial loan facilities and cross exchange rate movements between the different currencies in the external debt portfolio.

Currency Composition of External Debt

68. The currency composition of the external debt stock as at end-December 2021 is shown in

Table 5.3. At the end of the period, USD-denominated debt constituted 71.7 percent of the external debt stock, with EUR-denominated debt making up 17.4 percent. The Chinese Yuan (CNY), GBP and Japanese Yen (JPY) accounted for 3.3 percent, 1.9 percent, and 1.8 percent of the external debt stock, respectively. The remaining 3.9 percent was accounted for by other currencies, including the Kuwaiti Dinar (KWD), Korean Won (KRW) and Saudi Riyal (SAR), among others.

Table 5.3: Currency Composition of External Debt Stock, 2020 & 2021

Currency	2020*	2021 Prov.		
	(in percent)			
USD	70.0	71.7		
EUR	17.3	17.4		
CNY	3.8	3.3		
GBP	2.2	1.9		
JPY	2.0	1.8		
Other currencies	4.5	3.9		

Source: Ministry of Finance

*Revised figures

69. The USD currency share of the external debt portfolio increased slightly by 1.7 percentage points from the 2020 position. The EUR currency share also rose, albeit marginally, by 0.1 percentage points over the same period. The shares of CNY, GBP, JPY and other currencies all declined in 2021.

External Debt by Creditor Category

- 70. The external debt portfolio consists of debt from multilateral, bilateral, commercial sources, as well as export credits and other concessional debts.
- 71. At end-December 2021 commercial debt to the tune of US\$16,234.7 million accounted for the largest share of the external debt stock, representing 57.3 percent (Table 5.4). The outstanding Eurobonds increased from US\$10,215.1 million to US\$13,119.9 million, making up 80.8 percent of the commercial debt stock and 46.3

Table 5.4: External Debt Stock by Creditor Category, 2020 & 2021

Description	2020*		2021 Prov.	
Description	US\$ mn	%	US\$ mn	%
Commercial	12,630.5	51.1	16,234.7	57.3
o/w ICM	10,215.1	41.3	13,119.9	46.3

Export Credits	966.1	3.9	981.1	3.5
Other Concessional	1,541.7	6.2	1,594.9	5.6
Total	24,715.8	100.0	28,339.2	100.0

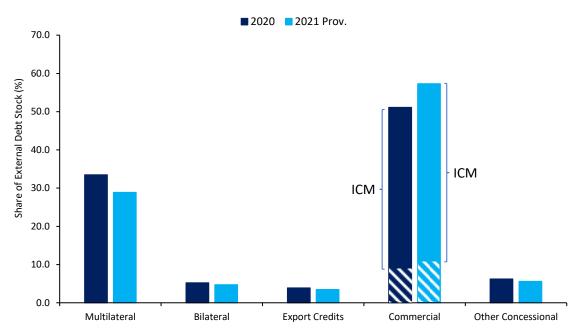

Source: Ministry of Finance

percent of the total external debt stock. The remaining portion of external debt comes from multilateral, bilateral, export credits and other concessional creditors representing 28.9 percent, 4.7 percent, 3.5 percent and 5.6 percent, respectively, all of which declined over the period.

72. The consistent declining trend in these categories of external debt is as a result of Ghana's dwindling access to concessional funding since attaining lower middle-income status and the challenges of emerging markets in securing funding on relatively soft terms. Figure 5.3 shows a breakdown of external debt stock by creditor category.

Figure 5.3: External Debt Stock by Creditor Category, 2020 & 2021

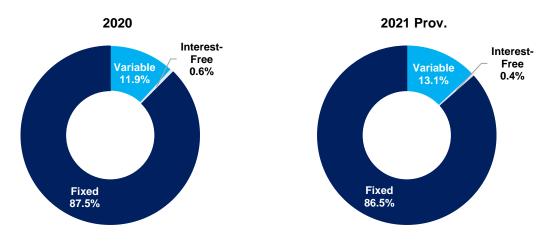

Source: Ministry of Finance

Interest Rate Structure of External Debt

- 73. The external debt portfolio comprises of fixed-rate, variable-rate and interest-free debt. The share of fixed-rate debt decreased from 87.5 percent as at end-December 2020 to 86.5 percent as at end-December 2021, whereas variable-rate debt increased from 11.9 percent to 13.1 percent over the same period. The increase of 1.2 percentage points in the share of variable-rate debt is mainly from debt owed to some commercial creditors which were contracted based on floating interest rates.
- 74. The share of interest-free debt, which is made up of subsidised loans from a few bilateral creditors, also declined by 0.2 percentage points over the same period (Figure 5.4).

Figure 5.4: Interest Rate Structure of External Debt Stock, 2020 & 2021

Ghana's Eurobond Issuances

- 75. Government indicated in its 2021 Budget Statement and Economic Policy plans to raise US\$3,000.0 million from the ICM, with the option to increase the amount to US\$5,000.0 million based on favourable market conditions. The proceeds were earmarked for budget support and liability management on both external and domestic bonds.
- 76. In March 2021, Ghana issued her ninth Eurobond on the ICM at a face value of US\$3,025.0 million in four (4) tranches. The transaction saw Ghana issue a 4-year zero coupon Eurobond of US\$525.0 million, in addition to 7-year, 12-year, and 20-year Eurobonds of US\$1,000.0 million, US\$1,000.0 million, and US\$500.0 million, at coupon rates of 7.750 percent, 8.625 percent, and 8.875 percent, respectively (Table 5.5).
- 77. The 2021 Eurobond was another landmark achievement since it was the first Sub-Saharan African sovereign USD issuance since the outbreak of the COVID-19 pandemic in 2020. The deal was also remarkable as Ghana became the first sovereign on the African continent to issue a zero-coupon Eurobond on the ICM.

- 78. Simultaneously with the new Eurobond issue, Ghana also carried out a tender offer for up to US\$250.0 million to buy back part of its outstanding 2023 Eurobond. The actual amount tendered for the buyback was US\$117.3 million.
- 79. As at end-December 2021, the total outstanding balance of Eurobonds issued stood at US\$13,119.9 million (Table 5.6).

Box 1: Ghana's 2021 Eurobond Issuance

In March 2021, Ghana became a trailblazer as the first country in Africa to issue a zero-coupon tranche Eurobond as part of its first ever 4-tranche Eurobond issuance at a face value of US\$3,025.0 million with proceeds of US\$2,883.3 million. The face value amount included a 4-year zero-coupon, 7-year weighted average life ("WAL"), 12-year WAL and 20-year WAL Eurobonds of US\$525.0 million, US\$1,000.0 million, US\$1,000.0 million and US\$500.0 million, respectively. The latter three (3) tranches were issued at coupon rates of 7.750 percent, 8.625 percent, and 8.875 percent for the 7-year, 12-year, and 20-year tranches, respectively. The zero-coupon bond was issued at a yield of 6.309 percent.

The transaction marked the first sub-Saharan African Sovereign US\$ issuance since the onset of the COVID-19 pandemic and enhanced Ghana's market access through the pioneering, innovative use of a zero-coupon tranche.

The sovereign bond was rated by all the three credit rating agencies: B3 by Moody's; B- by Standard & Poor's (S&P); and B by Fitch. Following an extremely well-attended series of investor calls, books opened on 29th March, 2021 with initial price thoughts ("IPTs") at Mid 70 cents for a 4-year zero-coupon note, 8 percent area for a 7-year WAL note, 9 percent area for a 12-year WAL note, and 9.5 percent area for a 20-year WAL note. Price guidance was revised to 76 cents area, 7.875 percent area, 8.875 percent area, and 9.375 percent area on the 4-year, 7-year, 12-year, and 20-year tranches, respectively, as Ghana headed into the US with books open around US\$4,000.0 million.

The order book was over-subscribed and peaked at US\$6,200.0 million, despite a mixed market backdrop faced with widening yields for SSA sovereigns, the risk of a possible third wave of COVID-19 infections across Europe, and the global trade disruption from the Suez Canal blockage.

Investor distribution of the RegS/144A Eurobonds was well-diversified, with interest heavily tilted to the US and UK, and with asset managers representing the largest share in the asset class of investors.

Part of the proceeds of US\$2,883.3 million in an amount of US\$125.9 million (including charges) was used to buy back the 2023 Eurobond through a tender offer. An amount of US\$1,500.0 million was used for budget support, while US\$1,257.4 million for further liability management operations.

The success of the transaction is reflective of Ghana's consistent ability to raise multi-billion-dollar financing and is testament to Ghana's hard-won credibility with investors, underpinned by strong growth prospects and disciplined fiscal consolidation efforts in 2020 despite the pandemic.

80. Secondary market yields of Ghana's outstanding Eurobonds for the period spanning August 2017 to December 2021 are shown in Figure 5.5.

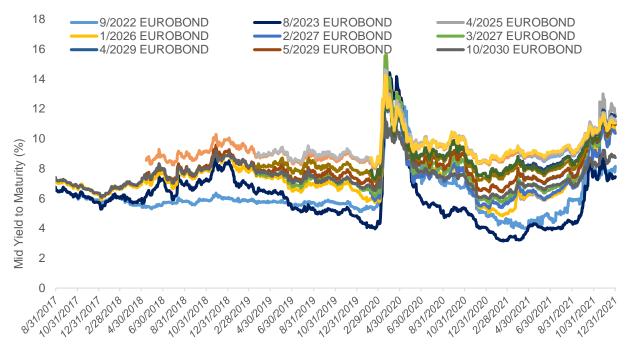

Figure 5.5: Evolution of Ghana's Eurobond Yields, 2017 – 2021

Source: Bloomberg

External Loan Disbursements

- 81. In 2021, total external PPG loan disbursements, fell short of the projected amount by US\$52.6 million (1.0%), mainly as a result of less than planned Eurobond issuance as part of programme loan disbursements. However, project loan disbursements exceeded the budgeted amount by US\$762.5 million (70.3%). Compared to 2020, total disbursements declined by 2.8 percent from US\$5,179.6 million in 2020 to US\$5,032.2 million in 2021. Table 5.7 provides further details of disbursement by creditor category for 2020 and 2021.
- 82. The list of outstanding external loans as at end-December 2021 is provided in Appendix 3.

Table 5.7: External Loan Disbursements by Creditor Category, 2020 & 2021

External Debt Service

- 83. Table 5.8 shows that total external debt service (principal repayments, interest payments and charges) on Government debt for 2021 amounted to US\$2,209.4 million, compared to US\$2,611.2 million in 2020. This represented a decrease of US\$401.8 million (15.4 percent).
- 84. Provisional principal repayments for 2021 amounted to US\$1,010.8 million, representing a decline of US\$534.4 million compared to the 2020 figure. Principal repayments which constituted 45.7 percent of the total debt service in 2021 was below the budget provision due to lower-than-expected amortisation payments. However, interest payments for 2021 totalled US\$1,198.5 million, representing an increase of US\$132.6 million over the 2020 payment due to interest paid on some commercial facilities and the 2021 Eurobond which was issued in March 2021.
- 85. External debt service paid to multilateral creditors was US\$195.7 million (8.9%), US\$104.6 million (4.7%) to bilateral creditors, US\$133.8 million (6.1%) to Export Credit Agencies, US\$1,577.2 million (71.4%) to commercial creditors, and US\$198.1 million (9.0%) to other concessional creditors.

*Revised figures

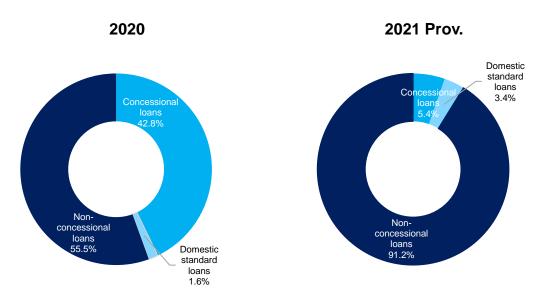

New Commitments

- 86. In 2021, Government signed new loan agreements and Eurobonds of US\$5,867.4 million, compared to the value of new commitments including Eurobonds signed in 2020 of US\$7,058.7 million.
- 87. Of the 2021 figure (excluding the Eurobond issuance), three (3) loans totalling US\$315.0 million (11.1%) were concessional, twenty-three (23) in the sum of US\$2,325.9 million were

non-concessional (81.8%) while three (3) totalling the equivalent of US\$201.5 million (7.1%) were domestic standard loans (Figure 5.6). Detailed information on the number of loans signed by funding types and sector is provided in Appendix 4.

Figure 5.6: Loans Signed, 2020 & 2021

Source: Ministry of Finance

Credit Ratings

- 88. The global episode of credit stress brought about by the COVID-19 pandemic and its attendant rating downgrades persisted in 2021, although at a subdued pace owing to additional measures put in place to combat the impact of the pandemic as well as the rollout of COVID-19 vaccines worldwide.
- 89. Ghana's ratings remained relatively stable in 2021 mainly on account of the robust measures initiated by Government in 2020 to address the COVID-19 situation. Three (3) rating actions were conducted on Ghana by Fitch, Moody's, and S&P with mixed results.
- 90. On 22nd June, 2021, Fitch Ratings revised Ghana's Long-Term Foreign-Currency Issuer Default Rating (IDR) outlook to negative from stable and affirmed the IDR at 'B'. In September 2021, however, Moody's and S&P affirmed Ghana's ratings at B3 and B-, respectively, and also maintained Ghana's outlook at negative and stable, respectively
- 91. It is worth noting that the change in the credit rating scores was not peculiar to Ghana alone. Several emerging market economies were also either downgraded or suffered worsening outlook during the period under review. See Table 5.9 for all the rating actions conducted on Ghana in 2021.

Table 5.9: Credit Rating

Agency	Rating	Outlook	Latest Rating Action	Last Publication Date
			September 2020: Rating downgraded	September 2021:
S&P	B-	Stable	from B to B-	Rating Affirmation
			June 2021: Outlook revised from stable	June 2021:
Fitch	В	Negative	to negative	Outlook Revised
			April 2020: Outlook revised from positive	September 2021:
Moody's	B3	Negative	to negative	Rating Affirmation

Source: Ministry of Finance

92. Ghana's credit ratings have recorded mixed performance since 2003. The evolution of Ghana's sovereign rating from Fitch Services, S&P, and Moody's is shown in Figure 5.7.

Figure 5.7: Evolution of Ghana's Sovereign Ratings, 2003 - 2021

Source: Ministry of Finance

Domestic Debt Stock

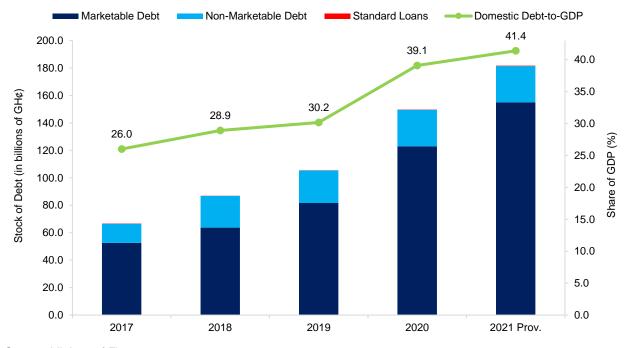

93. The value of total domestic debt outstanding amounted to GH¢181,777.2 million as at end-December 2021, compared to GH¢149,833.9 million as at end-December 2020 reflecting a nominal increase of 21.3 percent. The increase in the stock of domestic debt was mainly due to the net domestic borrowing used to support the 2021 budget and the crystallisation of contingent liabilities.

Domestic Debt by Category

- The domestic debt by category shows that 85.3 percent of the total domestic debt stock in 94. 2021 was sourced through marketable debt⁵ amounting to GH¢155,037.4 million, about 3.3 percentage points higher than the level in 2020 (82.0%). The non-marketable⁶ accounted for 14.5 percent of the domestic debt, totaling GH¢26,369.9 million, lower than the 17.8 percent in 2020. The share of domestic standard loans increased from 0.1 percent in 2020 to 0.2 percent in 2021, to a sum of GH¢380.0 million (Figure 5.8).
- 95. To ensure continuous development of the domestic debt market, Government strived to mobilise funds through only marketable debt instruments which accounted for the increase in the share of marketable debt in the domestic debt portfolio. The increase in the share of standard loans was also on account of the three (3) new standard loans signed in 2021 with a total disbursement of GH¢194.6 million. On the other hand, the reduction in the share of non-marketable debt was due to payment of maturing non-marketable debt of GH¢334.5 million.

Figure 5.8: Domestic Debt by Category, 2017 – 2021

Source: Ministry of Finance

⁶ Non-marketable securities include financial securities and instruments that are not transferable and cannot be bought or sold on the secondary market.

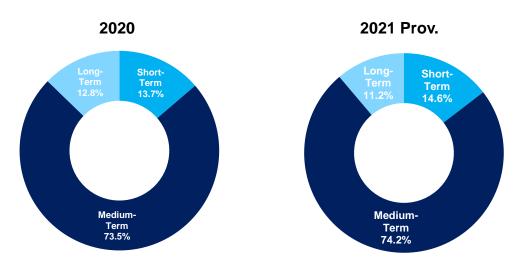

⁵ Marketable debt consists of financial securities and instruments that are traded and can be bought or sold on the secondary market.

Domestic Debt by Tenor

96. Investors' demand for short and medium-term Government securities was relatively higher in 2021. Accordingly, the proportion of short-term debt in the domestic marketable debt stock increased from 13.7 percent in 2020 to 14.6 percent in 2021. Similarly, the proportion of medium-term debt rose from 73.5 percent in 2020 to 74.2 percent in 2021. However, the proportion of long-term debt in the portfolio of domestic marketable debt decreased from 12.8 percent in 2020 to 11.2 percent in 2021 (Figure 5.9). Details are provided in Appendix 1A.

Figure 5.9: Domestic Debt by Tenor (Marketable Instruments), 2020 & 2021

Source: Ministry of Finance

Holding Structure of Domestic Debt

- 97. Domestic investors continued to deepen their participation in the domestic bond market in 2021. As a result, holdings of Government securities by local investors increased by 25.0 percent from GH¢121,925.1 million in 2020 to GH¢152,401.9 million in 2021, while foreign investor holdings grew by 4.7 percent in comparison, from GH¢27,687.2 million in 2020 to GH¢28,995.3 million in 2021. Consequently, the share of foreign holdings decreased from 18.5 percent to 16.0 percent between 2020 and 2021, while the share of local investors in the domestic debt portfolio increased from 81.5 percent to 84.0 percent over the same period.
- 98. The holding structure of Government securities continued to be dominated by the banking sector, including the Central Bank. At end-December 2021, the banking sector held 50.2 percent of the total domestic debt stock, which is a slight decrease from 51.3 percent recorded in 2020. However, the sector's nominal holdings increased from GH¢121,925.1 million at end-December 2021 to GH¢152,401.9 million as at end-December 2021, this is mainly attributed to increases in its stock of both the short and medium-term instruments.
- 99. The holdings by the non-bank sector increased in 2021 to 33.8 percent from 30.2 percent in 2020. This is mainly attributed to the increased participation of individual investors as well as firms and institutions.

Table 5.10: Holders of Domestic Debt (excl. Standard Loans), 2020 & 2021

Government of Ghana Par Yield Curve

100. Yields on Government securities at the primary market generally witnessed a downward trend in 2021 compared to the same period in 2020, with the exception of the 2-year and 5-year bonds which inched up slightly by 25 and 115 basis points, respectively. Figure 5.10 shows the cost of borrowing for Government securities in the primary market.

^{*}Revised figures

Secondary Market Developments

- 101. The secondary market in Ghana has seen steady growth over the past six (6) years with investors gradually moving away from the traditional concept of "buying and holding" securities.
- 102. Government has supported initiatives that seek to further grow and develop the market. Government is working with the Ghana Stock Exchange (GSE), the National Pensions Regulatory Authority (NPRA), and the National Insurance Commission (NIC) to establish a Domestic Credit Rating Agency (DCRA) to promote the development of the corporate debt market. The initiative will reduce the information asymmetry between market participants (borrowers, lenders, and regulators), promote credit-culture, risk-based lending, improve pricing of debt instruments, and overall financial sector development in Ghana. The DCRA will play an important role in the development of the Ghanaian financial sector by providing a systematic and comparable assessment of corporates and financial institutions to promote transparency and relative risk ranking.
- 103. Ghana continues to see sustained improvement in the Absa Africa Financial Markets Index (a benchmark for robust, accessible and transparent financial markets in Africa), moving to the fourth (4th) position in 2021 from sixth (6th) position in 2020 out of a total of twenty-three (23) financial markets ranked.
- 104. Government will continue to reform the primary market system and improve on the principle of market-making. The year 2021 saw the implementation of the new categorization of dealers on the market to include Bond Market Specialist (BMS) who must play the role of market making to deepen the market.

Settlement of Repo

- 105. The monetary value of repo transactions settled in 2021 was GH¢253,752.8 million,
 - representing an increase of 83.5 percent from GH¢138,285.5 million in 2020 (Table 5.11).

106. Out of the GH¢253,752.8 million repo transactions settled in 2021, settlement of collateralised repo transactions accounted for GH¢245,215.2 million (96.6 percent) whilst settlement of classic repo transactions (repo under Global Master Repurchase Agreement (GMRA)) accounted for the remaining GH¢8,537.6 million (3.4 percent).

Table 5.11: Settlement of Repo Transactions, 2020 & 2021

Repo Type	2020* (in millio	2021 Prov. ns of GH¢)	% change

*Revised figures

107. GoG securities with total face value of GH¢260,869.1 million served as the underlying collateral value to facilitate the GH¢253,752.8 million repo transactions carried out in 2021. Of the GH¢260,869.1 million collateral value, GH¢250,550.5 million (96.0 percent) and GH¢10,318.6 million (4.0 percent) were used to support the settlement of Collateralised repo and GMRA based Repo transactions undertaken, respectively.

Secondary Market Trading of Government Securities

- 108. 2021 saw another milestone achieved by the secondary bond market. The volume of trades in 2021 was GH¢208,807.9 million of which GH¢185,865.6 million was in Government securities, representing 83.0 percent of the market size. In 2020, the total volume traded was GH¢108,405.3 million of which Government securities accounted 81.7 percent of the market size.
- 109. The sterling performance of the Ghana Fixed Income Market (GFIM) in 2021 was a result of relatively high returns on fixed income securities as well as investors' perception of the market as a safe investment platform. The domestic market accounted for 78.0 percent of trading on the market compared to end-December 2020 of 82.0 percent. Liquidity in the Government securities on the secondary market in 2021 was 122.0 percent compared to 81.0 percent in 2020.
- 110. The outstanding securities and the corresponding trade volumes over the last five (5) years for Government securities are presented in Figure 5.11.

Figure 5.11: Trade Volumes Against Outstanding Securities, 2017 – 2021

- 111. Settlement activities involving government securities on the secondary market recorded positive growth in 2021 relative to that of 2020.
- 112. The monetary value of the Government securities cleared and settled in the secondary market increased by 100.2 percent from GH¢ 96,830.4 million in 2020 to GH¢ 193,894.3 million in 2021.
- 113. The most actively traded government securities in the secondary market for 2021 was

*Revised figures

the 5-year Government bond. This was followed by the 3-year bond, 15-year bond, 2-year note, and 10-year bond in that order (Table 5.12)

Government of Ghana Secondary Market Yield Curve

- 114. Yields on short and medium-term instruments on the secondary market increased in 2021 by an average of 94 basis points and 82 basis points, respectively, compared to 2020, while yields on the longer dated instruments (beyond 10 years) declined by an average of 77 basis points (Figure 5.12). This was driven by investors' increased appetite for the shorter and medium-dated instruments.
- 115. The yields on Ghana's secondary bond market rose significantly in the second half of 2021, as the market priced in the projected high inflation rates in both developed and emerging economies.
- 116. At end-June 2021, the overall yield curve of Government securities improved compared to end-December 2020. This development was supported by relative stability in the domestic market as well as Government's effective liability management and debt operations in the first half of 2021. As a result, investor confidence was high, the reserve position was strong, and the Ghana Cedi maintained its relative strength against the US Dollar, depreciating only marginally compared to end-December 2020.

Ghana's Domestic US Dollar Bond

117. The face value of outstanding active domestic dollar bonds issued by the Government stood at US\$631.1 million in 2021 as against US\$388.9 million in 2020.

118. A new 5-year domestic dollar bond with a face value of US\$169.0 million was issued by Government in November 2021.

119. The domestic dollar bond is held solely by domestic investors. DMBs, Firms and Institutions, Insurance Companies, and other domestic investors' holdings accounted for US\$533.7 million, US\$60.6 million, US\$0.6 million, and US\$36.2 million, respectively in 2021 (Table 5.13).

Secondary Market Trading on Domestic US Dollar Bonds

120. The value of the domestic dollar bonds traded and settled in the secondary market in 2021 was US\$242.6 million, down by 26.2 percent relative to the amount of US\$328.6 million traded and settled in 2020 (Table 5.14).

Primary Dealer System

- 121. Government developed harmonised guidelines for Primary Dealers (PDs) in 2020 to guide the markets. In May 2021, the PD Guidelines and Requirements and Responsibilities were revised to include the introduction of the BMS system to replace the Joint Book Runners (JBRs) group under much stricter rules, requirements, and obligations. Under the revised Guidelines, PDs would continue to be the exclusive counterparts of Government in the auction of only Treasury bills while the BMS would be responsible for the issuance of securities with tenors of 2-years and above through the book-building process.
- 122. In May 2021, five (5) new PDs were included, four (4) of which were nonbank financial institutions, bringing the total number of PDs to seventeen (17) at end-December 2021 (Box 2).
- 123. An assessment was conducted on all seventeen (17) PDs, out of which nine (9) outperformed the target of 70.0 percent minimum requirement. Eight (8) could not meet their requirements during the period under review, including three (3) PDs which existed before the new guidelines were introduced in May 2021. These were ABG, CBG and GTB and, therefore, registered various shortfalls as seen in Table 5.15. The remaining five (5), all of which were new PDs, also failed to meet the 70% minimum requirement target.

Section Six: Liability Management Operations

- 125. The objective of Government's Liability Management (LM) Programme, as stated in the 2021 Budget Statement and Economic Policy and the 2021 MTDS, was to minimise the refinancing and rollover risks that are embedded in the public debt portfolio.
- 126. One key measure taken in 2021 as part of Government's ongoing liability management programme was the substitution of portions of domestic debt financing with external debt financing to restructure the domestic debt. Government Domestic LM Programme in 2021 took the form of both Active and Passive Liablity Management⁷ Operations (LMOs).
- 127. As already indicated, Government, in March 2021, successfully issued a 4-tranche Eurobond of US\$3,025.0 million on the ICM. In line with the proceeds utilisation plan, an amount of US\$1,500.0 million was used for general budget support, including critical infrastructure. An amount of US\$1,374.7 million was used for liability management operations, out of which a buyback of about US\$117.3 million of the 2023 Eurobonds equivalent to GH¢672.0 million was carried out. This has reduced the outstanding stock of the 2023 Eurobond from US\$1,000.0 million to US\$148.8 million. An amount of US\$1,257.4 million was used for further liability management operations in the domestic debt market.
- 128. On the domestic debt portfolio, Government conducted liability management totalling GH¢7,203.3 million (US\$1,257.5 million) to help smoothen the maturity profile of public

domestic debt and to reduce refinancing risk and interest cost. Of this amount, GH¢4,700.6 million was used for active LMOs to buyback medium-term government securities, while GH¢2,502.7 million of the Eurobond proceeds was utilised under the passive LMOs to cover shortfalls due to uncovered auctions experienced in the course of the year (Table 6.1).

Table 6.1: Liability Management Operations, 2021

	US\$'mn	(GH¢'mn)
Domestic LM	1,257.5	7,203.3
Active LM	820.6	4,700.6
Passive LM	436.9	2,502.7

Source: Ministry of Finance

⁷ Active LMOs are when expensive instruments are retired through buybacks and Passive LMOs are when Government partly or fully redeems maturing securities that are not rolled over.

Section Seven: Contingent Liabilities

On-Lent Loan Portfolio and Recoveries

- 129. The stock of recoverable loans at the end of 2020 consisted of Export Credit Guarantee Department (ECGD) facilities and on-lent loans to SOEs, with a total outstanding of GH¢15,737.2 million compared to GH¢15,713.4 million at end-December 2021. A total recovery of GH¢23.8 million was made from the Volta River Authority (VRA) in 2021 (Details provided in Table 7.1).
- 130. In 2021, one (1) On-lending Agreement was signed with VRA for the Pilot Photovoltaic II project to a tune of EUR15.0 million.

Table 7.1: Recoveries on On-Lent Facilities, end 2021

Description	Outstanding Debt end 2020*	Recoveries in 2021	Outstanding Debt end 2021	
	(i	n millions of GH¢)

Loan Guarantees

131. Government issues guarantees in support of loans extended to SOEs to help to reduce the SOEs' credit risk, making it possible for the SOEs to raise credit at lower costs. In 2021, Government guaranteed a loan borrowed by the Consolidated Bank Ghana for an amount of US\$50.0 million. The total outstanding stock of Government-backed guarantees as at end-December 2021 amounted to GH¢3,155.7 million (US\$526.0 million), as detailed in Table 7.2.

Table 7.2: List of Outstanding Guarantees, end 2021

Public Private Partnerships

- 132. Public Private Partnerships (PPPs) have shown to be very useful globally in providing alternative investment opportunities in the infrastructure sector of the economy. However, they can also be a source of high fiscal risk if not properly managed.
- 133. Contingent liabilities have arisen out of two (2) PPP projects, namely the National Identification System (NIS) Project and the Teshie-Nungua Desalination Project. At end-December 2021, an amount of US\$7.4 million was paid in support of the Teshie-Nungua Desalination Project. An amount of US\$17.0 million was paid in 2021 for the on-going NIS in line with the Government Support Agreement. The contingent liabilities arising from the existing PPP projects is summarised in Table 7.3.

Table 7.3: Contingent Liabilities Arising from PPPs, 2017-2021

*Revised figures

134. To streamline the procurement of PPPs and Investments Projects, two key legislations have been passed: the Public Private Partnership Act, 2020 (Act. 1039); and the Public Financial

Management (Public Investment Management) Regulations, 2020 (L.I. 2411), to guide the reform agenda in the delivery of PPPs and Investment Projects in the country.

135. The fiscal risks associated with PPPs in general need to be managed to ensure that they do not compromise fiscal sustainability.

Credit Risk Assessment

- 136. SOEs play critical roles in strategic sectors of the economy by providing essential services such as electricity (generation, transmission, and distribution), water, telecommunications, and other public utilities. These SOEs have consistently operated at a loss and accumulated excessive debt in their efforts to sustain their operations.
- 137. Government, as the sole shareholder, has in some cases had to bail out the affected SOEs through cash transfers, equity injection, and restructuring/refinancing of their debt.
- 138. The various forms of support (direct and indirect) to SOEs tend to place substantial fiscal burden on Government. As part of measures to mitigate fiscal risks to Government in respect of any form of support, MoF is required to assess the credit risk of that entity before granting the support.
- 139. In 2021, an assessment was conducted on institutions seeking Government support to borrow on their balance sheet for capital expenditure needs, refinance existing debt on their books, and in some instances for liquidity support.
- 140. Nine (9) entities were assessed during the year under review, based on different request lines in line with Sections 67, 73, and 76 of the PFM Law. Details of credit risk assessments carried out in 2021 are shown in Table 7.4.

Table 7.4: List of Government Support to Various Institutions in 2021

141. As indicated in the 2020 APDR, five (5)⁸ SOEs were given direct payroll expenditure support amounting to GH¢72.5 million, while one (1) SOE was still going through the process to receive Government support which was completed in 2021. In 2021, Government continued its payroll support to these SOEs whose operations were adversely affected by the COVID-19 pandemic (Table 7.5). Government issued bonds totalling GH¢126.3 million to sustain their operations.

Table 7.5: Government Bailout Support to Various Institutions in 2021

- 142. During the year under review, additional requests for payroll support, recapitalisation support, working capital support, and comfort letter were received from four (4)⁹ SOEs in the energy and aviation sectors to address their short-term and medium-term financial challenges. However, only one (1) entity out of the four (4), Tema Oil refinery (TOR), was approved to receive payroll support but was still going through the process to receive said support.
- 143. In total, Government offered payroll support to SOEs amounting to GH¢198.8 million for 2020 and 2021.

Financial Sector Clean-up

144. In 2015, the financial sector in Ghana was characterised by excessive high lending rates, high Non-Performing Loans (NPLs), and mis-selling of products across different regulators, among others. These resulted in liquidity challenges in some financial institutions, making them unable to honour depositor cheques and investment redemptions. In response, the BoG in 2015 and 2016, undertook an Asset Quality Review (AQR) of the banking sector while the Securities and Exchange Commission (SEC) assessed the Fund Management Industry (FMI) in 2018.

39

⁹ TOR, Ghana Cylinder Company, BOST, GCAA

⁸ MMTL, PSC Tema Shipyard, GACL, Ghana Post Company and Intercity STC

- 145. The BoG AQR revealed that most local banks were illiquid with high NPLs and weak corporate governance structures. The exercise also revealed some legacy problems, poor risk management practices, related party transactions, regulatory non-compliance, and weak supervision (questionable licensing processes and weak enforcement), leading to a significant build-up of vulnerabilities in the sector which threatened to plunge the banking sector into a crisis state if not resolved timeously. These infractions rendered most of the universal banks undercapitalised and highly insolvent. Indeed, several of the banks were merely surviving on the liquidity support from the BoG.
- 146. SEC's assessment of the FMI revealed that the banking sector challenges had had a contagion effect on the industry, coupled with weak regulatory supervision prior to 2017. Fund Managers were investing heavily in fixed income instruments within the banking/non-banking sector amidst high appetite of the investing public for fixed income instruments. This led to product mis-selling and guaranteed unrealistic returns in the industry.
- 147. As a result, BoG and SEC in 2018 and 2019 embarked on reforms to strengthen the financial sector that led to improved liquidity and resilience in the sector, enhanced risk management and corporate governance, as well as financial inclusion.
- 148. Government committed to bailout depositors and investors of the failed financial institutions and to support BoG to resolve the problem banks. By the end of December 2020, Government had completed the bailout exercise in the banking sector while the bailout for investors of the failed FMCs, which started in 2020, continued in 2021.
- 149. In 2021, Government provided a total bailout package amounting to GH¢3,483.0 million to settle the claims of investors of sixteen (16) failed FMCs for which liquidation orders have been obtained. It was also used to make partial payment of up to GH¢50,000 each to all validated claims of customers of another seventeen (17) FMCs for which liquidation orders were still pending at the court. The partial bailout intervention was on social and humanitarian grounds to provide relief for investors who had gone a year without any payments and were in dire straits as a result of the fallout of the impact of the COVID-19 pandemic on the economy on their financial positions. The claimed amount was a combination of marketable bonds of 3-year, 4-year, and 5-year of GH¢1,899.8 million, GH¢541.4 million, and GH¢495.8 million, respectively, and a 5-year zero coupon bond of GH¢546.1 million. Table 7.6 provides a summary of Government interventions in the financial sector.

Table 7.6: Government Interventions in the Financial Sector Bailout, 2017-2021

Energy Sector Debt

- 150. Government continued negotiations in 2021 to review existing Power Purchase Agreements (PPAs) and enforce the moratorium on signing new ones and any other long-term "Take-or-Pay" contracts. Renegotiation of the PPAs, when finalised, is expected to reduce the overall financial burden imposed on Government by such "Take-or-Pay" contracts.
- 151. To this end, the Ministry of Energy (MOE) is working with key stakeholders to renegotiate and restructure the PPAs with seven (7) operational IPPs—namely Karpower, Cenpower, Sunon Asogli, Early Power, Twin City Energy (formerly Amandi), AKSA Energy and Cenit. This is to ensure that power is affordable for industrial, commercial, and residential use.
- 152. Government has also reached agreements with some IPPs to convert power plants to tolling structures, switch to the use of natural gas to power the plants, and reduce tariffs. This is expected to result in considerable savings to Government and the nation over the remaining lifespan of the PPAs. These savings are expected to come from a combination of reduced capacity and energy charges across the portfolio.
- 153. Total payment made in 2021 in respect of the energy sector debt arising out of the PPAs was GH¢6,938.2 million, comprising GH¢6,363.1 million and GH¢575.1 million in cash and bonds, respectively.

Section Eight: Other Financing Arrangements

E.S.L.A. PLC

- 154. As part of the Government's plan to refinance energy sector debts, E.S.L.A. PLC was incorporated in September 2017 as an independent Special Purpose Vehicle (SPV) to, among others, issue debt securities for the purpose of refinancing the Energy Sector Debt.
- 155. At end-December 2020, the company had issued bonds with a face value of GH¢8,294.2 million, out of which it had previously bought back and cancelled bonds amounting to GH¢664.7 million, leaving bonds outstanding to the value of GH¢7,629.5 million. The company issued additional bonds of GH¢2,052.6 million in 2021 and bought back and cancelled GH¢1,020.5 million. It also exchanged GH¢1,034.2 million of tranche E3 bonds for GH¢1,073.2 million of tranche E1 bonds, bringing the value of outstanding bonds as at 31st December, 2021 to GH¢ 8,700.6 million. Details are shown in Table 8.1 below:

Table 8.1: E.S.L.A. Plc Outstanding Bonds, end 2021

Table 8.3.

156. Levy collections have increased over the period of 12 months to December 2021, with an amount of GH¢2,437.4 million collected. The spike in Energy Debt Recovery Levy (EDRL) received is as a result of receipts of about GH¢115.0 million relating to 2020 which were transferred in 2021. A summary of collections from October 2017 when the bond program commenced is shown in Table 8.2.

157. The company made the required coupon payments to its bondholders in 2021. As at end-December 2021 a total of GH¢1,477.7 million had been transferred to bondholders as coupon payments due in 2021. Funds in excess of its immediate obligations were transferred to the lockbox in accordance with the requirements of the bond programme and invested in permissible investments. The remainder was kept in the debt service reserve account towards future obligations. Details of coupon payments for 2021 are shown in

158. Following the issuance of the bonds, SOE debts amounting to approximately GH¢10,057.0 million has been novated to E.S.L.A. PLC as at 31st December, 2021. Out of this amount, GH¢1,870.3 million was settled in cash, while the remaining GH¢8,186.6 million was covered by debt swaps. This is detailed in Table 8.4.

¹⁰ Per arrangements established by the Ministry of Finance, 6 percent of the PGIS component of the EDRL is required to be lodged in the PGISsA2 Account held with Bank of Ghana for use in rural electrification. Periodic reconciliations are therefore performed on the EDRL received and the relevant amounts are transferred to the PGISsA2 account. In view of this, a total of GH¢166.5 million out of the EDRL received in 2021 (GH¢2,603.9 million) was transferred to the PGISsA2 account, bringing the EDRL received by the company for the year to GH¢2,437.4 million.

159. The outstanding ESLA bonds are held mainly by domestic investors. As at end-December 2021 domestic investors accounted for GH¢8,694.2 million (99.9%) of the outstanding stock, with foreign investors accounting for GH¢6.4 million (0.1%). Details of holders of outstanding stock in ESLA bonds are shown in Table 8.5.

Daakye Trust Plc

- 160. Daakye Trust Plc is an SPV which was established by the Ghana Education Trust Fund (GETFund) in May 2020 to issue debt securities to settle GETFund's Creditor and Contractor Debt. The debt issuance is backed by scheduled amounts of the 2.5 percent GETFund Levy, which have been assigned to the issuer for debt service in accordance with the Government budgetary allocation and after adjustment for the capping policy.
- 161. Pursuant to its mandate, the Daakye Trust Plc has established this bond issuance programme to raise an amount of aggregate GH¢5,500.0 million to settle GETFund's debt. As at end-December 2020, the company had issued bonds with a face value of GH¢1,392.6 million. Additional bonds amounting to GH¢1,060.6 million were issued in 2021, bringing the outstanding bonds to

Section Nine: 2022 Medium-Term Debt Management Strategy (MTDS)

- 165. The 2022-2025 MTDS has been prepared in fulfillment of Section 52 of the PFM law to guide borrowing and manage the existing debt portfolio in 2022. The MTDS lays out the strategy for the period 2022-2025 with respect to the stock of debt and projected financing for the fiscal deficits as outlined in the 2022 Budget Statement and Economic Policy. The primary objective of the MTDS is to choose the optimal composition of debt instruments to ensure Government's financing requirements are met at the lowest possible cost with a prudent degree of risk, in line with the Medium-Term Fiscal Framework (MTFF).
- 166. In addition, the following secondary objectives are spelt out in the MTDS to facilitate its primary objectives:
 - Diversifying the investor and instrument base;
 - Enhancing the efficiency of the primary and secondary market by developing a benchmark yield curve; and
 - Evaluating and managing the risks embedded in the debt portfolio, based on different debt related variables.
- 167. The 2022 MTDS seeks to reduce the stock of short-term component of the domestic debt portfolio and re-profile external commercial debt through debt management operations to reduce the exposure to expensive debt. Furthermore, the strategy aims at issuing medium to long-term Treasury bonds to lengthen the maturity structure through building benchmark bonds and reforms to deepen the domestic debt market. It reiterates the need for fiscal consolidation to stabilise growth of public debt and adjustment of the debt ceiling in the medium-term.
- 168. The financing for 2022 seeks to further develop the domestic market by proposing new instruments to diversify the debt portfolio and increase the debt financing capacity of the domestic market. Government will continue to build benchmark bonds by tapping into or reopening medium to long-term instruments.
- 169. To support the growth of the annuity market and consistent with the MTDS, Government will issue longer-dated bonds to match assets to liabilities. Treasury bills will continue to be offered for liquidity and cash buffers to account for seasonality in cash flow demand.
- 170. External financing for the budget in 2022 will be supported by receipts of IMF SDR allocation and loans. In the medium-term, Government will explore the option of various instruments on the ICM based on market conditions.

- 171. Over the medium-term, Government will continue its liability management programme and will explore opportunities to reduce the level of risks embedded in the public debt portfolio through buy-backs or debt exchanges.
- 172. To manage and monitor the refinancing and rollover risks, which may lead to liquidity and/or excessive increase in the cost of debt servicing, the strategy sets out strategic risk benchmarks. The share of T-bills in the domestic debt stock is expected to be within 8 -13 percent for treasury management purposes with an ATM of the total debt portfolio to be not less than 8 years. Over the medium-term, the share of floating rate debt in the total external debt is expected to be within a range of 10-15 percent, while the share of the entire public debt portfolio facing interest rate resetting in a year is not expected to be more than 30 percent.

Section Ten: Debt Sustainability Analysis

173. Ministry of Finance worked together with its relevant stakeholder institutions to conduct Ghana's Debt Sustainability Analysis (DSA). The DSA was prepared in accordance with the fiscal policy requirements of Sections 16(b)(i), 20(2)(c), 54(2)(b) of the PFM law, and Section 1 of the FRA which serves as a guide for fiscal policy indicators, specifically public debt as a percentage of GDP, and achieving a positive primary balance to meet the macroeconomic and debt sustainability objectives.

174. The objectives of the DSA include:

- Evaluating the solvency and liquidity status of the country's total public debt portfolio, while considering current and future debt service obligations;
- informing policymakers on the public fiscal space available to Government to meet its funding requirements in the light of current debt levels;
- making sound budgeting and funding decisions for Government projects and programmes by providing a link between fiscal planning and the MTDS; and
- identifying risks embedded in the current debt portfolio and offering mitigation measures.
- 175. The scope of the DSA covers PPG debt of the central government. In addition to the standard PPG debt, the DSA also captures debt contracted by selected SOEs¹¹ which, although are not explicitly backed by Government guarantee, are deemed to be very crucial for the assessment of public debt dynamics over the next four (4) years.
- 176. The DSA is based on baseline scenarios anchored on macroeconomic assumptions and the medium-term fiscal framework in the 2022 Budget Statement, detailed in Box 4.

¹¹ Based on their fiscal risk exposure to Government.

Box 4: Macroeconomic Assumptions Underlying the DSA (2022-2025)

Growth: The outlook for growth is expected to rebound strongly in the mediumterm, supported by strong policy response aimed at stimulating the economy. Overall Real GDP growth is projected at 5.8 percent in 2022. Over the mediumterm (2023-2025), real GDP is projected to grow at an average of 5.6 percent—with yearly growth rates of 5.4 percent, 5.3 percent, and 6.0 percent in 2023, 2024 and 2025, respectively.

Fiscal balance: The fiscal balance is expected to be contained over the medium-term to return to the FRA broad deficit threshold of 5.0 percent of GDP by 2024 and a primary surplus in 2022 as well as over the medium-term, to stabilise the growth of debt and promote debt sustainability.

External sector: The trade surplus is projected to narrow on account of lower receipts from cocoa beans and products, in addition to a higher imports outturn driven largely by pick-up in economic activities. These developments in the trade account, coupled with higher investment income and services payments, are expected to widen the current account deficit over the medium-term.

The capital and financial account is projected to record net inflows. These expected net inflows will, however, not be adequate to offset the current account deficit, which will lead to worsening of the overall balance of payments position.

Financing Assumptions: Financing will be from both domestic and external sources. External financing will be a combination of exceptional financing (use of IMF SDR allocation) and loans (of at least US\$750.0 million, with an option to increase it by a further amount of US\$750.0 million). It is assumed that the remaining financing to cover the deficit will be raised from the domestic debt market. However, the exceptional financing from the use of the newly allocated SDR by the IMF will augment and reduce domestic borrowing needs. Additionally, possible contingent liabilities arising from the financial sector, energy sector, and PPPs have been factored into the analysis.

Stress Tests

177. The 2022 DSA considered six (6) standardized standardised stress tests on real GDP, primary balance, exports, exchange rate depreciation, other flows, and a combined stress test. The standardized standardised test for contingent liability assumes a financial sector shock of 5 percent of GDP for all LIC- DSA users and a 2 percent shock for contingent liabilities not accounted for under general Government. Tailored stress tests are triggered for commodity prices and market financing. Commodity prices are shocked to reduce real GDP growth and revenues. Market financing stress test was applied. Interest rate was shocked by 400 basis points and maturity shortened to five-years for newly issued market debt or shortened by two–thirds of the original maturity that is less than five years (sustained for three years from the second year of projection).

Debt Carrying Capacity

178. The Debt Carrying Capacity (DCC) determines external debt indicative thresholds and total public debt benchmark for the PPG debt. The DSA classifies Ghana's DCC as a medium performer with a Composite Index (CI) score of 2.77.

External DSA

179. As shown in Table 10.1, the Present Value (PV) of external debt to GDP ratio was breached under the baseline scenario over the full-time horizon. The debt service-to-exports and debt service-to-revenues ratios also exceed their thresholds under the baseline scenario throughout the forecast horizon.

Table 10.1: External DSA Thresholds and Baseline Scenario

Indicators	Thresholds	Baseline			
		2022	2023	2024	2025
PV of External Debt to GDP	40.0	42.1	45.9	47.2	47.1
PV of External Debt to Exports	180.0	132.4	142.0	151.6	153.2
PV of Debt Service to Exports	15.0	18.2	18.8	18.0	19.7
PV of Debt Service to Revenue	18.0	28.9	30.7	27.4	29.8

Source: Ministry of Finance

180. Under the extreme shocks, the market access shock—which models a widening of spreads and reduction in maturities—showed the highest impact on external debt service-to-revenues ratios (Appendix 5).

Public DSA

181. The PV of Debt-to GDP ratio under the baseline exceeds the benchmark for the full horizon. Under the baseline, the public debt is projected to decline over the long-run but remains vulnerable to growth and terms of trade shocks (Appendix 6). The growth shock, which models a fall of one standard deviation, has the most severe impact on all public debt indicators (Table 10.2).

Table 10.2: Public DSA Thresholds and Baseline Scenario

Indicator	Threshold	Baseline			
		2022	2023	2024	2025
PV of Total Public Debt to GDP	55.0	87.8	88.2	88.8	87.4

Source: Ministry of Finance

Improving DCC and DSA

- 182. Overall, the DSA assessment shows that Ghana's risk rating is in high risk of debt distress. Given that the trajectory of public debt remains elevated above the threshold throughout the entire horizon, aggressive and committed fiscal consolidation is required to bring the debt path below thresholds.
- 183. Exogenous shocks, including delayed recovery from the COVID-19 pandemic and adverse terms of trade movements, will pose significant liquidity and solvency risks in the future.
- 184. Following from the analysis conducted under the various assumptions, some recommendations are proposed. These include:
 - Ghana's performance for some of the sub-components of the CI worsened, leading to a
 fall in its CI rating from 2.81 to 2.77, although still classified as a medium performer.
 However, an improvement in the current score can classify Ghana as a strong performer,
 thereby raising the thresholds and creating space to borrow. Additionally, increased
 efforts should be made to improve upon Ghana's CI and CPIA scores by strengthening
 the current policies and institutional structures existing in the country.
 - In addition, to attain and maintain debt sustainability, continued aggressive fiscal consolidation and discipline, as well as the building of cash buffers, would be key to reduce debt levels and ensure timely servicing of debt.

Section Eleven: Public Debt Management Reforms and Initiatives

- 185. Ministry of Finance continues to spearhead the implementation of reforms to improve management of Government public debt. The aim is to ensure debt is contracted at low cost over the medium to long-term consistent with a prudent degree of risk and promoting development of the Ghanaian debt market.
- 186. The Ministry also engaged and collaborated with various key stakeholders, including the Select Committee on Finance of Parliament, investors, and market players in identifying the necessary reforms for implementation to support market development and debt management.

Reforms in Primary Dealer System

- 187. Reforms in the PD system have led to the introduction of the BMS to improve efficiency and facilitate continuous engagement with the market. Government in 2020 developed and published new guidelines for PDs and BMSs. The purpose of the guidelines is to guide the purchase of Government securities in the domestic debt market.
- 188. The guidelines ensures that BMSs have underwriting, distribution and marketing capabilities both locally and internationally, and are required to trade on the secondary market in support of the fixed income market over a period of time. The implementation of these guidelines will guide the markets and improve the efficiency and transparency on the GFIM.

International Capital Market Funding Programme and Sustainable Development

- 189. The current global financing conditions show a risk of rising inflationary trends with possible overheating of most advanced economies, and a potential for increased cost of international financing. Despite these challenging conditions on the ICM, it is always advisable for Government to administratively structure its funding sources to take advantage of available opportunities whenever the risks get abated, and the outlook becomes favourable.
- 190. Government intends to explore potential multiple instruments if market conditions permit. The potential instruments are listed as follows:
 - Regular Eurobonds;
 - Social Instruments such as social bonds and social loans to refinance/finance projects undertaken by Ministries, Departments and Agencies (MDAs) within eligible social categories;
 - Term loan and/ or bridge financing;
 - Green instruments such as green bonds and green loans to finance/refinance projects of MDAs within eligible green categories; and

- Sustainability Instruments such as sustainability bonds to finance/refinance projects of MDA projects within eligible green and social categories.
- 191. Based on the newly developed Sustainable Financing Framework published in 2021, Government, through the MoF, will periodically screen programmes and projects proposed by the various MDAs for green and/or social elements. These programmes and projects will form the basis for issuances of Green, Social or Sustainability Financing transactions, either to finance new or refinance existing expenditures that have been identified in accordance with this Sustainability Financing Framework, and which are consistent with the International Capital Market Association (ICMA), Green Bond Principles 2021, Social Bond Principles 2021 (SBP), and Sustainability Bond Guidelines 2021.
- 192. With this Framework, Ghana will be charting a new territory by creating an integrated framework that enables the Government to issue instruments in either a *use-of-proceeds* format or *sustainability-linked* format.

Communication with Market Participants

- 193. Government will continue to engage investors and market participants through regular townhall meetings, conference calls, and investor presentations with PDs, BMSs, and key market players.
- 194. The establishment of a dedicated and updated "Investor Relations" section on the MoF website is still being pursued to enhance Government's relations with investors and promote market transparency. In addition to this, MoF has developed a "Public Debt" section to improve communication with investors and the general public through dissemination of debt information. MoF is committed to providing information on borrowing and public debt based on sound data reporting principles.

Limits on External Borrowing

195. Government plans to accelerate and deepen its fiscal consolidation efforts in the medium to long-term and is committed to reducing the solvency ratio and improving the liquidity ratios significantly. As a result, achieving a positive primary balance is critical to ensure macroeconomic stability and debt sustainability.

Further to this objective, and to support the reduction in the rate of debt accumulation, the total limit set for new commitments on concessional and non-concessional borrowing have been scaled down from US\$2,500.0 million to US\$2,000.0 million for 2022.

National Borrowing Guidelines

196. The National Borrowing Guidelines (NBG) has been developed to guide public entities on the procurement of loans and other forms of borrowing pursuant to the provisions in the 1992 Constitution, the PFM Law, and the PFM Regulations. The NBG set out the parameters

in conducting public borrowing, guaranteeing, and lending practices in Ghana. They also set out the roles and responsibilities of stakeholders in the borrowing process and the relevant laws supporting the procurement or contracting of debt. The implementation of the guidelines will help mitigate likely fiscal risks arising from the issuance of guarantees and on-lending facilities and ensure that due process is followed in the acquisition of credit and loan guarantees.

Credit Risk Policy

197. Government has drafted a Risk-based Fee Policy, which will be subjected to stakeholder consultations prior to submission to Parliament for approval and implementation. The risk-based fee will be charged to cover the cost and the credit risk to Government based on the outcome of a credit risk assessment of a public entity. In line with the Government's review of MDAs fees and charges, administrative fees will be charged to improve the quality-of-service delivery and where feasible, undertake assessments on these entities.

Operational Risk Management Framework

- 198. The Debt Management Office of MoF has developed an Operational Risk Management (ORM) framework that outlines guidelines for identification, evaluation, measurement, monitoring, and reporting of all operational risks to which the public debt may be exposed to. It also sets out the mitigation options detailed in the Business Continuity Plan (BCP) and Disaster Recovery Plan (DRP) as part of a wider ORM framework.
- 199. The risks associated with debt management include operational risk, market risk, and liquidity risk. The objective is to minimise the consequences of negative events to ensure debt sustainability is not impaired. The framework provides guidelines on acceptable risk tolerance levels, parameters and thresholds for risk measurement, classification, and timelines for remedial actions. The successful implementation of this framework will result in the design of a more robust and efficient internal control system for the Ministry.

Enhancement of Debt Management Software

- 200. The purpose of this reform agenda is to make use of Information and Communication Technology (ICT) enabled tools and digital platforms to ensure business continuity. The Commonwealth Secretariat (COMSEC) has deployed a new debt management system for modern debt management offices to meet the requirements of the new challenges on sovereign debt recording and management.
- 201. The new system, Meridian, is designed to assist debt management offices to record and monitor all the functions of debt management, starting from loan/grant negotiations to full repayment of the loan. Debt-related transactions that are recorded in the Meridian constitute one of the core components of government accounting systems and the overall public financial management.

202. MoF, in collaboration with COMSEC, has started implementing the Commonwealth Meridian. Prior to the new web-based debt software, MoF was using the Commonwealth Secretariat Debt Recording and Management System (CS-DRMS). The migration to the Meridian web-based architecture is for ease of accessing government public debt database and improved functionality in the recording and management of debt. Plans are underway to complete the migration process for the debt management office to fully run on the Meridian. This initiative will strengthen Ghana's institutional capacity for the management of public debt within an ORM framework.

Section Twelve: Conclusion

- 203. Public debt management in 2021 was adversely impacted by the COVID-19 pandemic, with its deadlier variants of the virus. The continuous COVID-19 restrictions in some advanced countries due to the emergence of new variants of the disease, as well as the normalisation of interest rates in the US, contributed to the tightening of global financing conditions. Despite these challenges, Government was able to issue a 4-tranche Eurobond with a face value of US\$3,025.0 million.
- 204. Government also issued and tapped into medium-term and long-term domestic bonds, notably 5-year, 6-year, 10-year, 15-year, and 20-year bonds, to build benchmark bonds.
- 205. Fiscal consolidation proceeded slowly in the post-COVID-19 recovery period as the pandemic continued to affect revenue and expenditure performance. The fiscal deficit, excluding financial and energy sector bailout costs declined from 11.7 percent of GDP in 2020 to 9.6 percent of GDP in 2021. Public debt as a percentage of GDP stood at 80.1 percent in 2021, up from 76.1 percent of GDP in 2020. The implementation of the Ghana CARES programme, however, supported economic recovery. The external sector remained strong despite the current account deficit rising to 3.3 percent of GDP in 2021 compared to 3.1 percent of GDP in 2020, as the trade surplus narrowed to 1.6 percent of GDP in 2021 compared to 3.0 percent of GDP in 2020.
- 206. Government was able to access additional financing from the World Bank and IMF to support efforts at mitigating the effects of the pandemic.
- 207. Contingent liabilities from the energy and financial sectors continue to pose significant risks to fiscal and debt sustainability. Even though Government completed the banking sector bailout in 2020, the additional contingent liabilities from the failed FMCs still pose a challenge to public debt sustainability.
- 208. To ensure that the public debt is on a sustainable path, Government will continue to monitor and undertake various macroeconomic and financial stress tests to improve debt dynamics. In this respect, Government has concluded renegotiations of some PPAs with IPPs under the "Take-or-Pay" arrangements to address Government's fixed cost exposures. Government will continue to enforce the moratorium on signing new PPAs and any long-term "Take-or-Pay" contracts until further notice or unless exemptions are granted by Government on a case-by-case basis.
- 209. Government is committed to pursuing a fiscal consolidation plan that will ensure that the overall fiscal deficit returns to the fiscal responsibility threshold of 5.0 percent of GDP by 2024, with the companion fiscal barometer, the primary balance, registering sustained surpluses, and institute new revenue measures to enhance domestic revenue mobilisation while also rationalising expenditures to achieve value-for-money.

Glossary

Average Time to Maturity Measures the weighted average time to maturity of all the

principal payments in the portfolio.

Bilateral debt Debt contracted from sovereign countries.

Bonds Debt securities that give holders unconditional right to

fixed income or contractually determined payments on a

specified date or dates.

Buy-back The repurchase by a debtor government of all or a portion

of its debt at a discount on face value.

Commercial Debt Short-term to medium-term borrowing from banking

institutions other than Official Development Assistance

(ODA).

Concessional loans Loans that are extended on terms substantially generous

than loans contracted on the open market.

Contingent Liability Contingent Liability Obligations that do not arise unless a

discrete event occurs in the future.

Coupon The annual interest rate paid on a bond, expressed as a

percentage of the face value.

Credit Rating A rating based on an assessment of the credit worthiness

of the borrower. Credit ratings of Government are done by credit rating agencies such as Standard and Poor's

(S&P), Moody's, and Fitch.

Credit Risk Credit risk refers to the risk that a borrower may not repay

a loan and that the lender may lose the principal of the

loan or the interest associated with it, or both.

Debt Relief Any form of debt reorganisation that reduces the overall

burden of debt

Debt Service Debt payments in respect of both principal and interest.

Debt-to-GDP Ratio of a country's gross public debt (in nominal terms)

to a country's gross domestic product (also in nominal

terms).

less principal repayments.

Disbursement The transfer of the committed loan amount from the

lender to the borrower once contractual conditions are

fulfilled.

Domestic Dollar Bond A bond issued in USD outside the United States.

Domestic Debt Debt issued on the domestic capital market.

ESLA The Energy Sector Levies Act, 2015 (Act 899) is an Act

to consolidate existing energy sector levies to promote prudent and efficient utilisation of the proceeds generated from the levies, impose a price stabilisation and recovery levy, facilitate sustainable long-term investments in the

energy sector, and to provide for related matters.

E.S.L.A. Plc A Special Purpose Vehicle (SPV), incorporated as a

public limited liability company, to issue long-term bonds

to resolve Ghana's energy sector debt obligations.

Eurobond Bond issued by a borrower in a foreign country,

denominated in a Eurocurrency (e.g., US Dollar, Canadian Dollar, Yen, Euro), and under-written and sold

by an international syndicate of financial institutions.

Export Credits They are government financial support, including direct

financing, guarantees, insurance, or interest rate support provided to foreign buyers to assist in the financing of the

purchase of goods from national exporters.

External debt Debt issued to foreigners outside the domestic capital

market

Fiscal Responsibility Act The Fiscal Responsibility Act, 2018 (Act 982) is an Act to

provide for fiscal responsibility rules to ensure

macroeconomic stability and debt sustainability.

Gross Domestic Issuance New debt issuance required to partly fund the budget

deficit and maturing debt from domestic sources.

Gross Domestic Product The market value of all final demand goods and services

produced within a country in a given period, usually a quarter or a year. The GDP is determined using data for production, expenditures, or income and is presented in nominal terms at current prices or in real terms at constant

prices.

Gross Public Debt The cumulative aggregate of the net value of all

government borrowings (drawdowns), less principal

repayments and denominated in a single reporting

currency as of the end of a reporting period.

Guarantee An undertaking to answer for the payment of another

person's debt or obligation in the event of a default by the

person primarily responsible for the debt repayment.

Interest Payment The amount paid periodically over a period to a lender as

compensation for use of capital.

Interest Rate The cost or price of borrowing, or the gain from lending,

normally expressed as an annual percentage rate.

International Capital Market Financial markets for selling and buying of long-term debt

or equity-backed securities.

Maturity The time at which the debt instrument expires and all

principal and interest payments related to the instrument

is expected to have been repaid in full.

Mis-selling A sale practice in the financial market space in which a

financial product or service is deliberately misrepresented or a customer is misled about the suitability of such

financial market product or service.

Monetary Policy Rate The rate at which Ghana's Central Bank, Bank of Ghana,

lends to commercial banks.

MTDS A debt management strategy planned to be implemented

over the medium-term (usually three to five years) to achieve a composition of a desired debt portfolio with

regards to the cost-risk trade-off.

Multilateral debt Debt contracted from multilateral financial institutions

such as World Bank and the IMF, and regional development banks such as the African Development

Bank.

Net Borrowing The difference between Issuance and Redemption of a

debt instrument.

Net domestic financing
New debt issuance required to partly fund the budget

deficit from domestic sources less maturities.

No-Objection An approval granted by the Minister for Finance to an

entity to borrow on their books without any further

recourse to Government.

On-lending Government-borrowed funds lent to SOEs and other

institutions. Government would generally do this as a measure to promote strategic policy implementation.

PFM Act The Public Financial Management Act, 2016 (Act 921) is

an Act to regulate the financial management of the public sector within a macroeconomic and fiscal framework; and to define responsibilities of persons entrusted with the management and control of public funds, assets, liabilities

and resources.

Primary Dealer A firm that buys Government securities directly from the

Government with the intention of re-selling them to others.

Principal Repayment Payment made towards reducing disbursed outstanding

debt stock

Public Debt Total debt obligations of Government and guarantees

extended to public sector companies, institutions, and

agencies.

Refinancing risk The risk associated with a borrower not being able to

borrow to repay existing debt.

Repo A generic name for both a Repurchase Transaction and a

Sell/Buy-Back. It is a sale of a quantity of securities (by the Seller) at a purchase price at the start of the transaction and a simultaneous agreement to repurchase from the other party (Buyer) at a different price and at a

future date.

Roll-Over The extension or transfer of debt from one period to the

next

Secondary Market A market where previously issued financial instruments

such as bonds are bought and sold; a market that

investors sell to other investors.

Short-Term Debt Outstanding debt with a maturity of less than one year.

Sinking Fund A fund created by a borrower for the purpose of settling

debt obligations.

Special purpose vehicle A subsidiary company with an asset or liability structure

and legal status that makes its obligations secure even if

the parent company goes bankrupt.

State-Owned Enterprise A legal entity partially or wholly owned by Government to

conduct business on or on behalf of Government.

Yield curve A graph that shows the mathematical relationship

between yield and maturity computed across all

government securities (or other securities).

Yield The return on an investment or interest received from

holding a particular security. The yield is usually expressed as an annual percentage rate based on the investment's cost, current market value, or face value.
